Manchester & Altrincham

CLIBRANS' POPULAR Collections of Bulbs.

FOR INDOOR AND OUTDOOR CULTIVATION.

Carriage Free to any Station in the United Kingdom.

Our collections of Bulbs are so well known, and so highly appreciated, as to call for little in the way of remark. We frame them on the most liberal and comprehensive scale, consistent with high-class quality, and offer them at prices that will bear comparison with any other house of repute in the trade. Our customers can always rely upon them to give every satisfaction, as we consider that in studying the interests of our patrons we are best serving our own.

TESTIMONIALS.

From Mr. EDWARD TINDALE, The Gardens, Ravensworth, Gateshead:—"Thanks for Roman Hyacinths to hand, they are the best Bulbs I have ever seen.

From Mr. J. PROFFITT, Rushworth, Halifax:—"The Bulbs you supplied me with in the autumn gave the greatest satisfaction, they were admired by all who saw them."

From Mr. HORROCKS, Gardener to J. WALTON, Esq., Woodlands, Newton Heath:—"The Roman Hyacinths and bulbs generally which you supplied last autumn have been very good indeed."

"CHEAP" BULBS.—We would caution growers against purchasing so-called *cheap* Bulbs. Large quantities are bought up each season from the growers *after* the trade has been supplied, and when only inferior bulbs are left. These are advertised at low prices, and the result can only be disappointment to those who buy them. We grow thousands of Hyacinths, Tulips, Narcissus, Spiraeas, &c., every year for cutting and decorative purposes, and find, from experience, the best Bulbs produce the finest blooms and in greater abundance, consequently they are the cheapest and most satisfactory in the end.

FOR GENERAL INDEX SEE PAGE 48.

CLIBRANS' CHOICE SELECTED Bulbs and Roots, FOR EARLY FORCING.

Being fully aware of the importance of supplying only the finest and most reliable bulbs for forcing that it is possible to procure, we are extremely careful that only thoroughly matured and picked bulbs are bought. Indeed, the hundreds of thousands of bulbs that we ourselves use annually for forcing purposes are all from the same stocks as those offered in this catalogue. It is to our constant care and lengthy experience that we attribute our great success and annually increasing sales.

Early Single Pure White Roman Hyacinths.

EARLY SINGLE WHITE ROMAN HYACINTHS.

OUR SPECIAL LINE.

The Early White Roman Hyacinth is invaluable for providing a plentiful supply of cut bloom during the early Winter months, and everyone with a greenhouse should grow at least a few, as their cultivation is simple, and only moderate heat is required to force them into bloom. Each bulb produces several spikes of pure white fragrant flowers. The bulbs may be planted thickly in pots or boxes, and if the first batch is planted in August, they will flower during October. For successional lots to these, follow the treatment given for the ordinary Hyacinth (*vide* page 6), then a supply of bloom will be produced until after Christmas, when the Dutch varieties commence to flower. The Italian Hyacinths bloom two or three weeks later than the Early White Roman, and require the same treatment.

We have again been fortunate in securing a small importation of White Roman Hyacinths of abnormal size. As no further supply of this quality can be procured, we recommend Exhibitors and others who want the finest bulbs obtainable to order at once. We offer them only subject to being unsold at 170/- per 1000; 18/- per 100; 26 per doz.

EXTRA LARGE SELECTED BULBS. Per 1,000, 155/-; per 100, 16/6; per dozen, 2/3.

LARGE SELECTED BULBS. Per 1,000, 135/-; per 100, 14/6; per dozen, 2/-.

FINE BULBS. Per 1,000, 90/-; per 100, 10/-; per doz. 1/6.

TESTIMONIALS.

Mr. G. EVANS, The Gardens, Gwynfryn, Crickieth:—"I am pleased to inform you that the Roman Hyacinths we had from you last August are the best we ever had."

From Mr. W. T. SHACKSON, Porthkerry Gardens, Barry:—"The Roman Hyacinths you supplied me with last year were admired by every one who saw them, every bulb throwing up a remarkable number of flower spikes of the finest quality."

From Mr. G. PIERCE, The Gardens, Cam-yr-Alyn, Rossett:—"I am pleased to say that all the bulbs you supplied us with last autumn have given entire satisfaction. The Roman Hyacinths were a fine lot."

Mr. D. POWELL, Gardener to Colonel Wallace, Chesterholme, Newport, Mon., writes:—"You will be pleased to know that the Roman Hyacinths I had from you last season were the best I have ever had, no less than 5 to 8 spikes of bloom to each bulb, and not one bulb failed."

Mr. CHAS. ROBERTS, Halston Gardens, Whittington, Salop, writes:—"The Roman Hyacinths you supplied me with last season turned out excellent, in fact the best batch I ever saw. I consider your Romans surpass all other bulb specialists."

From Mr. JOHN B. CRICHTON, Gardener to Lord de Ros, Old Court, Strangford:—"I have great pleasure in calling your attention to the quality of the Roman Hyacinths which you supplied me with last year. They were the finest Bulbs that ever I got, and proved a great success in quantity and quality of flowers."

CHOICE SELECTED BULBS AND ROOTS FOR FORCING—continued.

Early White Italian Hyacinths.

This variety succeeds the White Roman. It is a profuse bloomer, and should be grown near the glass to keep the foliage dwarf.
Specially Selected Bulbs, per 100, 13/-; per doz., 2/-

Early Mountain White Italian Hyacinths.

A splendid pure white variety, resembling the Early White Roman. It has fine foliage, is very floriferous, and well adapted for decorative purposes.

Specially Selected Bulbs, per 100, 14/-; per doz., 2/-

Early Blue Roman Hyacinths.

Rather later than the white variety, of a beautiful blue colour.

Specially Selected Bulbs, per 100, 10/6; per doz. 1/6.

Early Double Rose Italian Hyacinths.

Specially Selected Bulbs, per 100, 14/-; per doz., 2/-

Early Single Yellow, Straw-coloured Hyacinths.

A pretty and useful variety, later than the White Roman, and of a pale yellow colour.

Specially Selected Bulbs, Per 100, 17/6; per doz., 2/6.

Dutch Hyacinths for Early Forcing.

A number of the select named Hyacinths are well adapted for forcing purposes. *Vide* pages 7 to 10.

Tulips for Forcing.

Single and Double Tulips, suitable for forcing—*Vide* pages 12 to 14

Polyanthus Narcissus.

DOUBLE ROMAN. Extra Large specially selected bulbs, per 100, 5/-; per doz., 9d. For description see page 17.

PAPER WHITE. Large Flowered Variety. Specially selected bulbs, per 100, 6/-; per doz., 1/- For description see page 17.

SNOWFLAKE. Per 100, 6/-; per doz. 1/-

Daffodils for Forcing.

For extra large forcing bulbs, see pages 18 to 22.

Dielytra Spectabilis.

For description and cultural notes, see page 25.

Extra strong imported roots, per 100, 30/- to 45/-; per doz., 4/- to 6/-

Freesias.

For description and cultural notes, see page 25.

REFRACTA ALBA, pure white, large selected bulbs, per 100, 4/6; per doz., 9d. Specially selected bulbs, per 100, 6/6; per doz., 1/-

LEICHTLINI MAJOR, pale primrose, large selected bulbs, per 100, 5/-; per doz., 10d.

Liliums.

For descriptions, cultural notes, and other varieties, see page 30.

CANDIDUM (*The Old White Garden Lily*). Specially selected bulbs, per 100, 20/-; per doz., 3/-

HARRISII (*The Bermuda Easter Lily*). Strong Bulbs, per 100, 55/- and 65/-; per doz., 8/6 and 10/-; each, 9d. & 1/-

Extra large picked bulbs, per doz., 14/- and 16/-; each, 1/3 and 1/6.

Tuberoses.

For descriptions and cultural notes, see page 40.

DOUBLE AMERICAN (*The Pearl*). Extra Large Selected Bulbs, per 100, 12/-; per doz., 1/9.

— — — Fine Bulbs, per 100, 10/-; per doz., 1/6.

AFRICAN. Fine selected bulbs, per 100, 17/6; per doz., 2/6.

Solomon's Seal.

(*Polygonatum Multiflorum*).

For description see page 37. Strong Clumps, per doz., 3/- to 4/-

Spiræas.

For descriptions, cultural notes, and other varieties, see page 32.

JAPONICA. Extra strong imported clumps, per 100, 35/-; per doz., 5/-

— — — Fine strong clumps, per 100, 26/-; per doz. 3/6

— — — **COMPACTA MULTIFLORA.** Extra Strong Imported clumps per doz., 3/6 and 5/-

ASTILBOIDES. Extra strong clumps for forcing, per doz., 6/-

— — — Fine Clumps, per doz., 5/-

— — — **FLORIBUNDA.** Extra selected clumps for forcing, per doz., 4/6 and 5/6

SPIRÆA ASTILBOIDES.

Lily of the Valley.

See page 29.

Flowering and Foliage Plants,

PREPARED FOR FORCING,

For Conservatory and Greenhouse Decoration, or for Cutting during Winter.

LILAC.—MARIE LEGRAYE.

Acer Negundo variegata, leaves handsomely variegated with white, very ornamental. 2/6 each.

Andromeda floribunda, waxy bells produced freely. Bushy plants, well set with buds. 2/6 each.

— **japonica**, the *Lily of the Valley* Shrub; pretty white Lily-of-the-Valley-like flowers. Plants well set with bloom. 2/6 each.

Azalea Daviesi, pale sulphur, changing to white, trusses large, deliciously scented, excellent for forcing. 2/6 each.

— **Ghent**, lovely shades of orange, flesh, pink, red, white, and yellow. Well set with buds. 2/- and 2/6 each.

— **double flowering** varieties; well set with buds. 2/6 each.

— **indica**, invaluable for greenhouse or conservatory decoration, producing flowers in great profusion in a variety of colours. Our selection, 2/-, 2/6 and 3/6 each; 21/-, 24/-, 30/-, and 36/- per doz.

— **mollis**, in fine shades of orange, flesh, pink, rose, salmon, &c., extra strong, with large number of buds. 15/-, 18/-, 24/-, and 30/- per doz.; 1/6, 2/-, 2/6, and 3/6 each.

— Standards, on short stems. 5/- and 6/- each.

— **X sinensis**, flowers of the most beautiful shades of orange, and larger than "Azalea Mollis." 2/6 each.

— **X sinensis**, "Anthony Koster," bright golden yellow; undoubtedly the largest flowered and finest variety yet raised; a grand acquisition. 2/6 to 3/6 each.

— **rustica flore pleno** (named varieties), with double flowers in various shades of colours. 2/6 each.

— **occidentalis**, white, sweetly scented; a beautiful variety. 2/- and 2/6 each.

— **pontica**, orange-yellow, very fragrant and free; most useful for forcing, either for decoration or cut flowers. Plants well set with buds. 1/6 and 2/6 each.

Azalea Vaseyii (Rhododendron), rosy pink, mottled at base inside, 2/6 each.

Boronia megastigma, admired for its sweetly-perfumed flowers. 1/6 and 2/6 each.

Bouvardias, in great variety, invaluable for cut flowers. Flowering plants, 9/-, 12/-, and 18/- per doz.; smaller, 4/- and 6/- per doz.

Calceolarias, Herbaceous, our own "Gold Medal" strain. Plants in autumn in 3-inch pots, 2/6 per doz.; in 5-inch pots, from February onwards, 6/-, 9/- and 12/- per doz.; young plants from stores in autumn, for potting on, 1/6 per doz.

Calla æthiopica ("Lily of the Nile"). 1/- to 1/6 each.

— **grandiflora**, 1/6 each.

— **Perle von Stuttgart**, 1/- to 1/6 each.

— **"Little Gem,"** miniature form, 9d. and 1/- each.

— **The Godfrey**, a compact and sturdy growing variety, spathes pure white, very early and produced with the utmost freedom; a grand variety, 1/- and 1/6 each.

Pure white flowers, grand for Christmas and Easter decorations.

Camellias, choice named kinds, in variety, 24/-, 30/-, 36/- and 42/- per doz.

— extra-sized plants, 5/-, 7/6, 10/6 and upwards each.

Carnations, Tree, in variety. Strong plants for Winter flowering, 12/-, 15/- and 18/- per doz.

Cerasus (Flowering Cherries), of sorts, 2/6 and 3/6 each.

Choisya ternata (Mexican "Mock Orange", lovely white flowers of delicious fragrance. 1/6 to 2/6 each.

Clethra alnifolia, desirable for slow forcing, spikes of white blossoms, deliciously-scented. 2/6 each.

Cyclamen, strong plants, in sin. pots, gold medal strain. 6/-, 9/-, 12/- and 15/- per doz.

FLOWERING AND FOLIAGE PLANTS FOR FORCING—continued.

Cinerarias, our famous "Gold Medal" strain, in 3 in. pots, 2/6 per doz.; in 5 in. pots, 6/-, 9/- and 12/- per doz.; young plants from stores, for potting on from July to October, 1/6 per doz.

Cytisus fragrans, yellow flowers, deliciously fragrant. 1/- each.
— *scoparius Andreanus*, very ornamental for greenhouse or conservatory decoration, producing enormous quantities of flowers, the upper part being deep golden yellow, and the lower petals bronzy-red. 1/6 and 2/6 each.

Daphne indica alba, 1/6 and 2/6 each. } An exceedingly sweet-
— *rubra*, 1/6 and 2/6 each. } scented, free-
— *Mezereum*, red. 1/- to 2/6 each. } flowering class of
— "var. album," white, 1/- to 2/6 } plants.

Deutzias. See page 25.

Dielytra (*Dicentra*) *spectabilis*, graceful wreaths of silvery-pink flowers. Extra strong imported roots, 6d. and 9d. each; 4/- to 6/- per doz.; 30/- and 45/- per 100.

Epacris, fine free-blooming plants, in variety. 2/- to 2/6 each.

Ericas, in variety; best Winter flowering sorts, 2/- to 2/6 each.

Euphorbia jacquiniiflora, orange-scarlet bracts, fine for Winter cutting. 1/6 to 2/6 each.

Exochorda grandiflora, large snowy-white flowers; handsome and free. 2/6 each.

Gardenias, of sorts. Strong vigorous plants, 2/- to 2/6 each.

"Guelder Rose," or Snowball (*Viburnum Opulus sterile*), lovely white flowers, freely produced, fine for cutting or decoration. Plants set with buds, 2/6 each. See also *Viburnum*

Helleborus niger angustifolius. Of this splendid Christmas Rose we can offer probably the finest clumps in the trade. Our stock is in good condition for forcing for the production of flowers at Christmas or earlier, in cold houses; or, if preferred, the clumps may be planted out and covered over with bell glasses or a sheet of ordinary glass, to preserve the flowers in all their purity. 1/6, 2/- and 2/6 each.

— *niger* (Christmas Rose), ordinary type. 6/-, 9/- and 12/- per doz., according to size.

— *maximus* (*altifolius*)—Miss Hope's variety—a grand variety, large flowers. 1/6 and 2/6 each.

For Complete Collection of *Helleborus*, see Catalogue of Herbaceous Plants. Free on request.

Hyacinths, in pots. 1/- to 1/6 each.

— White Roman, in pots. 1/6 to 2/6 per pot.

Hydrangea paniculata grandiflora, enormous panicles of white flowers. Strong forcing plants. 1/- and 1/6 each.

— Standards, on 2½ to 3½ ft. stems, 2/6 to 3/6 each.

— *stellata fimbriata*, flowers in great profusion and of immense size; bracts pure white, beautifully fringed. 1/6 each.

— *rubra plena*, a most charming variety. 1/6 each.

Japanese Maples, elegant shrubs, with foliage of diversified form and very rich colours, varying from green to deep crimson, effective for conservatory, table decoration, &c., 2/6 and 3/6 each.

Kalmia glauca, lilac-purple flowers, set with buds. 1/6 and 2/6 each.

— *latifolia*, rose-coloured flowers, set with buds, 2/- and 2/6 each.

Laburnums, 2/6 and 3/6 each.

Laurestinus, French white, well set with buds, 2/- to 2/6 each.

Ledum palustre, white, set with buds. 1/6 to 2/6 each.

Lilac, Charles X., well-known variety, fine for forcing. A dark place is requisite for forcing if the flowers are desired white. 2/6 each.

— *Madame Lemoine*, a superb double white form, with long compact spikes; a grand acquisition, 2/6 each.

— *Marie Legraye*, flowers pure white and freely produced in large trusses; one of the finest for forcing. 2/6 each. (See illustration on previous page).

— *Souvenir de L. Spath*, a magnificent variety, bright red flowers, the best in this shade, very large truss, extra fine. 2/6 each.

Lily of the Valley. See page 29.

Magnolia conspicua (Yulan Tree), white flowers, reverse of petals sometimes suffused purple; beautifully fragrant. 7/6 each.

— *Alexandrina*, flowers white, reverse of petals sometimes flushed purplish magenta; a grand variety, 5/- and 7/6 each.

— *Lennei*, interior of flower pale pinkish white, exterior deep purple; large and extra fine. 5/-, 7/6 and 10/6 each.

— *Norberti*, white, base of petals dark purple. 5/- and 7/6 each.

— *Soulangeana*, a beautiful variety, white, veined and shaded purple. 5/- and 7/6 each.

— *speciosa*, similar in habit to *Soulangeana*, but flowers paler and open later. 5/- and 7/6 each.

— *stellata* (*Halleana*), a species flowering before the leaves are fully developed, profuse bloomer even at two years old, double, sweet scented, almost hardy. 5/- and 7/6 each.

Narcissus, in variety. 1/- to 2/6 per pot.

Philadelphus hybridus Lemoinei, a pretty variety of *Mock Orange*, with pure white flowers, medium growth. Ground plants, 1/6 each; in pots, 2/6 each.

Primula sinensis, red and white. 6/- and 9/- per doz.

— *alba plena*, double pure white, very full, best for cutting, 1/- and 1/6 each.

— double sorts to name, red and white. 1/6 each.

Prunus sinensis, alba plena, flowers may be compared to innumerable small white roses (the size of a large button), clustered on branches. 2/6 each.

— *rosea plena*, delicate blush-coloured double flowers, thickly set on long slender branches. 2/6 each.

— *triloba*, double pink, extremely ornamental, and a free bloomer. 2/6 each.

Pyrus malus Scheideckeri, 2/6 and 3/6 each.

— *floribunda atrosanguinea*, 2/6 and 3/6 each.

Rhododendrons, in variety, best forcing kinds, whether for early or late forcing. 2/6 and 3/6 each.

Rhododendron præcox, rosy lilac, dwarf, fine for early forcing. 2/6 each.

Roses, finest Teas and Hybrid Teas, in variety, 12/-, 18/- 24/-, 30/-, to 42/- per doz.

— *Hybrid Perpetual and Bourbon*, extra strong plants of the best kinds for forcing. Established in pots, 1/6 to 2/6 each; 15/- to 24/- per doz.

Solanums, well berried; strong healthy plants. 9/-, 12/- and 18/- per doz.; 1/- and 1/6 each.

Spiræa Bumalda, cymes of pretty pink blossoms. 1/- each.

— "Anthony Waterer," fine heads of rich deep crimson flowers, plant of compact habit, free flowering and attractive. 1/6 each.

— *ruberrima*, deeper in colour than *Bumalda*; a charming plant. 1/- to 1/6 each.

— *callosa alba*, similar to *S. Bumalda*, but with white flowers, 1/- each.

— *confusa* (*media*), flowers pure white; one of the freest flowering *Spiræas* known. 1/6 each.

— *prunifolia flora plena*, very graceful and pretty; pure white double flowers. 1/6 each.

— *Thunbergi*, small white star-like blossoms. 1/6 each.

For *Spiræa japonica*, *Astilboides*, &c., see page 32.

Staphylea colchica, beautiful white flowers of singular form. One of the best forcing shrubs known. 2/- and 2/6 each.

Viburnum macrocephalum, large snowy balls of bloom, exceeding in size those of the old *Guelder Rose*. 2/6 each.

— *Opulus sterile* (see *Guelder Rose*).

— *plicatum*, similar to the old *Guelder Rose*, but flowers larger, whiter and more abundantly produced. 2/6 each.

— Standards. 3/6 and 5/- each.

Wistaria sinensis, standards, 5/- and 7/6 each.

Xanthoceras sorbifolia, a handsome shrub with pale green mountain-ash like foliage, and abundant long spike-like clusters of creamy white flowers with a copper-red centre. In pots 2/6 each.

The best RHODODENDRONS for early forcing are Jenny Lind, *Caucasicum pictum*, *Jacksonii*, *Cunningham's White*, *Helene Schiffner*, *Blandum*, and *Nobleanum*; of these, Jenny Lind can be had in bloom by Christmas without difficulty.

Hints on the Cultivation of Select Hyacinths.

The universal cultivation of this most beautiful flower is to a great extent due to its adaptability both to in and out-door treatment. In its season—from December to May for the greenhouse, and April and May for open ground—few flowers can compare with it for richness, effectiveness, and variety. To the amateur we trust the following simple directions for its culture will be found useful, and the cultivator who follows them may expect with certainty well-flowered plants, whether grown in the open garden, in glasses, or flower pots in the greenhouses.

HYACINTHS IN POTS.

SOIL.—It is scarcely advisable to buy bulbs if the cultivator does not make a suitable preparation of soil for the bulbs when bought, and we are convinced from a fairly long-experience with retail buyers, that in too many cases the goods bought, whether much bulbs, seeds, or plants, do not produce as good a result, and as pleasure or profit as they should do, owing to the buyer not making proper preparation in the way of compost. For Hyacinths in pots the quality of the compost is very important, and it ought, when practicable, to be prepared several months before it is required for use. The mixture *must* be light and rich, yet open; obviously, to make it light and rich, we require thoroughly good leaf mould, clean and well rotted, and the best of manure; cow manure by preference, at least one year old, and if two years old so much the better. For the ingredients of our compost there should be about one-third of really good turfy loam with plenty of fibre, another third of really old manure; to this add about one-sixth part of leaf mould and one-sixth of fine charcoal and coarse sand. New manure will simply ruin this compost for bulb growing. The whole of the above should be mixed together if possible several months before it is required, placed in a sunny position, and turned over several times to free it from worms, &c. If the Autumn be a very wet one, a few boards should be put on to keep the heavy rains from soaking through it. The compost should be used in a moderately damp condition, so that it may not be necessary to water as soon as the bulbs are potted.

POTS AND POTTING.—5-inch pots should be used for ordinary purposes, and 6½ inch if intended for exhibition. If new pots are used, they should be soaked in water for some hours before using; old pots, well washed, are far preferable to new ones. One large crock and three or four smaller pieces over it are all the drainage that is needed, as the compost should be passed through a sieve, and the rough portions placed at the bottom of the pots over the crocks. When potting, the apex of the bulb should be level with the top of the soil; the pot should therefore be filled up to the right height to place the bulb on, then a slight sprinkling

of sand; place the bulb on this without pressing the soil down, surround the bulb to the right height, then press moderately firm. All small bulbs and offsets should be broken off the base of the bulbs before potting. Stand the pots out of doors in some open space, where they will be quite exposed to all sorts of weather, on, by preference, a bed of ashes; put a little sand or cocoa fibre over the top of the bulb, and then cover six inches deep with a plunging material, such as ashes, sand, cocoa fibre, &c. If the weather is dry, in about a week after potting give a heavy watering, sufficient to go through the plunging material and the compost also, but if there is rain this is not necessary; neither should it be done for late potting if the nights are frosty.

TIME TO POT.—To bloom at Christmas the bulbs should be potted about the middle of September, and the whole of the potting completed, even for the latest lots, by the end of October. After this date the bulbs will begin to deteriorate if kept out of the soil, and as a consequence be a source of dissatisfaction to the grower.

WHEN TO FORCE.—The bulbs should stand as covered for eight or ten weeks, when it will be found that the pots are full of roots, and the bulbs have started into growth; they should then be moved into a cold frame or cold airy greenhouse, and the blanched growth gradually exposed to the light. The bulbs ought not to be taken direct from outside to the forcing house if the best results are aimed at. We should follow Nature's teaching, as exemplified in an ideal Spring, by gradually increasing the light and heat for the forced bulb. When placed in the forcing house a moderately moist atmosphere and a regular temperature, never exceeding 70 degrees, should be maintained. The pots should be placed near the glass, and extremely weak liquid manure given until the flowers begin to open, if we require dwarf foliage and brightly-coloured blooms. After the flowers show colour the liquid manure may be discontinued, and slightly tepid water given instead.

HYACINTHS IN GLASSES.

The single varieties are best for this purpose, and with careful attention very fine specimens may be grown, as the treatment is so simple. From the middle of October to the middle of November is the proper time to place the bulbs in glasses, which should be quite clean. Sweet rain water is the best for the bulbs. If spring or other hard water be used it should be boiled to take away the hardness. Fill each glass so that the water does *not quite* touch the base of the bulb, adding one or two small pieces of charcoal or a few grains of salt to keep the water sweet, and place them in a cool, dark, airy place or cellar for a few weeks. Examine in about a fortnight, and remove any decayed or slimy substance from the base of the bulbs. Change the water every three or four weeks, or oftener if discoloured, or if it smells disagreeably. In adding fresh water it must be the same temperature as that taken out. When the roots are about four inches long the glasses should be

gradually removed to the light, and, as soon as the crown has made a little growth, placed in the sunniest window, and given all the light and air possible, avoiding frost and draughts. Turn the glasses frequently, till the flower spikes are well developed. When the bulbs are in full growth the water in the glasses will be absorbed more rapidly, and should be replenished frequently. An occasional watering overhead will also be found very beneficial when the temperature of the room is rising, but should never be attempted when the room is getting colder. Sponge the leaves occasionally if the atmosphere of the room be dry and hot. Excessive heat and intense cold are very injurious. Supports should be used when the flower spikes are tall, or they may be overbalanced and get damaged. **Hyacinth Supports, also Glasses in plain or fancy designs, can be supplied.** For prices, &c., see page 42.

HYACINTHS IN BEDS, BORDERS, &c.

No other early Spring flower produces such a brilliant display in beds, borders, &c., as the Hyacinth, with its rich range of colours and delightful perfume. They will succeed in almost any ordinary well-worked garden soil, even in the neighbourhood of large towns though some enthusiasts go so far as to take soil out to a depth of about 12 to 18 inches, and make up with the same material as recommended for pot culture. A sunny position is best. Plant in October, in dry weather. The bulbs should be placed six to nine inches apart, and from four to six inches deep. If planted deep the time of blooming will be a little later, but the bulbs that are planted five or six inches deep are not so liable to be damaged by frost in the Spring as those planted nearer the surface. Good drainage is necessary, especially when the ground is heavy and wet. To such soil it is advantageous to add some

coarse sand, and to place some rough material at a depth of about 1½ to 2 ft. below the surface. Place a layer of coarse sand underneath and around the bulbs, but do not press the soil hard. After planting cover the beds with a thin coating of cocoa fibre, dead leaves, or other light material to protect from severe frost; when the growth has pushed through the soil remove the covering by degrees. Beds of one colour produce a more brilliant and telling effect than mixed colours, or designs worked in several colours; but the planter will follow the dictates of his own fancy. It is not imperatively necessary to place supports to the spikes of Hyacinths in beds, but if a short stick is affixed to each one it keeps it in position, and adds to the neatness and evenness of the bed. Should the weather be dry when the bulbs are in flower the flowering period may be lengthened by applying water liberally.

For **BEDDING HYACINTHS**, see page 11.

Select Named Hyacinths.

THE PICK OF HOLLAND.

In giving orders for Hyacinths it is necessary to *state whether they are intended for pots or glasses, or what proportion for each*, as if they are to be flowered in water, attention must be given to the shape of the bulbs, sorts, &c.

All the Single Hyacinths are good for early forcing, producing the largest and finest spikes, and should be ordered in larger quantities than the Double varieties. When the selection is left to ourselves we always send more Singles than Doubles, unless ordered otherwise.

Single Red, Rose, Pink, and Crimson.

SINGLE RED HYACINTH.

	Each.—s.	d.
Amy, bright carmine, large bells, fine truss	0 4
Baron Van Tuyll, pale rose, large spike, very early	0 5

Select Bedding Hyacinths.

These being quoted at considerably reduced rates, afford at a very small cost a grand opportunity for their extended planting in beds, borders, etc., thereby producing an attractive and magnificent display of bloom.

Clibrans' Select Single Bedding Hyacinths.

• For Massing, Ribbon Gardening, &c.

IN DISTINCT SHADES OF COLOUR AND TO FLOWER SIMULTANEOUSLY.

In our opinion too many sorts of Hyacinths should not be used in order to make a bed present a tasteful and effective display, and it is important that all should bloom at the same time, or as nearly so as possible. After repeated trials, we have selected varieties in the eight undermentioned colours for this purpose, of the same uniform height, standing well and erect, and blooming together.

Hyacinths, Crocus, and other bulbs (with the exception of Tulips, which may remain in the Bags), should be unpacked on their arrival and laid out in a cool dry place, to prevent heating and moulding. Where bulbs have failed to give satisfaction, we almost invariably find that they have not been taken out of the bags for some considerable time after receipt by the Customer.

Clibrans' Superb Single Bedding Tulips.

Of Uniform Height and to Bloom Simultaneously.

Few Bulbs are more easily cultivated or produce a more brilliant display of colours in the Spring than Tulips; a great deal of their beauty is, however, often lost by not having all the varieties planted in bloom together. These we offer have been specially selected, not only to ensure the most suitable colours, but also uniformity in height and in the time of blooming. By the use of these selections, our customers may depend upon the different varieties planted in their beds being in full beauty at one time.

The best time for planting is from October to the middle of November, each bulb being placed 4 to 6 inches deep, and about the same space apart. They grow well in almost every well-worked garden soil, but succeed best in an open, airy, and sunny aspect.

Tulips, Daffodils, and many other Spring flowering bulbs may be employed with charming effect in combination with such herbaceous plants as Arabis, Iberis, Polyanthus, Daisies, Primroses, Alyssum, Violas, Sedums, Saxifrages, and other early-flowering subjects. These afford considerable variety of foliage, colour, and form, and when used with Tulips, Daffodils, Narcissus, Crocuses, &c., make most lovely and effective beds for the Spring garden. All of them can be bought at very low prices, and with a little care in dividing and transplanting to a reserve garden, will serve for years, and make the flower beds and borders look cheerful and gay at that season of the year when most of us wish to see our gardens looking full of life and beauty.

Mr. F. BAKER, The Gardens, Bryngwy, Rhayader, writes:—"I beg to say that Mrs. Mansergh is more than pleased with the bulbs you supplied for this Spring Bedding, and thinks they are the finest she has ever seen. The Tulips are especially good."

Choice Single Early Tulips—continued.

The characters, A, B and C indicate the proportional earliness of the varieties of Tulips. For bedding purposes A and B may be used together, but those marked C are later.

The numbers preceding the names show the average height of growth in inches.

We would impress upon our customers that, to ensure the best results, Tulips grown in pots must have a liberal supply of water as soon as they are in active growth, but from the time of potting until they commence to push up no water is required.

All the Early Single Tulips can be used for forcing; The Due Van Thol varieties being the earliest for this purpose.

The directions for the pot culture of Hyacinths on page 6 are applicable to Tulips also.

TULIPS—continued.

Choice Double Early Tulips.

Double Tulips are slightly later in blooming than the Single varieties. A indicates first early; B second early; C late, if planted outdoors. The varieties marked * are best for early forcing. The numbers preceding names show the average height of growth in inches.

Parrot or Dragon Tulips. (May-Flowering).

It would be difficult to imagine anything more brilliant or more dazzlingly beautiful than a bed of these gorgeous flowers. They are very effective in mixed borders, shrubberies, &c., but not so well suited to indoor culture. They produce large and gorgeously coloured flowers, having beautifully feathered and laciniated petals, and are very distinct and different from all other kinds of Tulips. Blooming somewhat late, they form a fine succession to the early-flowering varieties. For cutting purposes they are invaluable, as they retain their beauty and freshness for a considerable time when kept in water. They should be grown in a rather heavy soil, but they cannot always be depended upon to bloom, as some years they produce very few flowers. Average height about 15 inches.

Sweet Scented Tulips.

Tulips are so largely and so generally grown for their brilliance of colouring and striking effect when massed in beds or borders, that their less apparent good qualities are in danger of being overlooked. Very few flowers indeed are there which unite richness of colour with sweetness of perfume, yet it is a fact that several varieties of Tulips are deliciously fragrant. The following varieties are all sweet-scented and we thus draw special attention to them, feeling sure that they would be much more widely cultivated, if their good qualities were more generally known. The Early Single varieties are equally suitable for pot culture or for bedding whilst the may-flowering sorts make charming groups for either beds or borders.

TULIPS—continued.

May-Flowering Single Tulips.

These grand old Cottage or Garden Tulips, almost forgotten and neglected, are again becoming increasingly popular, by reason of hybridising with the old sorts, some lovely and brilliant colours have now been obtained, and we feel sure they only need to be better and more widely known for their exquisite and lasting beauty to be appreciated. The time of flowering practically excludes them from being planted in beds with the earlier blooming Tulips for Spring decoration, but as subjects for the herbaceous border, &c., they are unrivalled, while owing to the tall growing habit, are by their long stems eminently adapted for cutting and indoor decoration. The following are recommended as a few of the best and most distinct varieties. The numbers preceding names show the average height of growth in inches.

Darwin Tulips (May Flowering).

This magnificent section of tall-growing late-flowering Tulips is hardly known in English gardens, and yet for size, variety, delicate beauty of colour, and elegance of form, they are incomparably superior to all the self-coloured Tulips in cultivation. Though tall and vigorous in growth and very much larger in flower than the early Tulips, they are nevertheless indescribably graceful. The colours too are never harsh, garish, or crude, but display the most subtle and delicious blending of artistic shades. The late Lord Leighton was delighted with them "because they were so different and so much more artistic in colour than the Tulips usually grown." The numbers preceding names show the average height of growth in inches.

To enable our patrons to judge of the merits of this race, we have pleasure in offering the following varieties as fairly typical of the series:—

	Per doz.—s. d.		Per doz.—s. d.
22 Carminea , glowing crimson-rose	1 3	23 Loveliness , soft rosy carmine, slightly flushed blush at margin	1 9
20 Clara Butt , soft delicate rose, with slight blush tinge on outer petals, a most distinct and lovely variety	5 0	20 Phyllis , white, shaded pale rosy lilac	1 6
19 Dorothy , pale mauve, shaded white	1 6	23 The Sultan , glossy maroon-black (may be called the Black Tulip)	1 6
25 Early Dawn , rosy lake, shaded blush	1 3	Splendid Mixture	per 100 6/- 1 0
20 Flambeau , brilliant scarlet, with blue centre	2 0		
23 Glow , brilliant crimson scarlet, centre blue, margined white	1 6		

Miscellaneous Tulips.

	Per 100	Per doz.
	s. d.	s. d.
Bizarres , single, with flamed or feathered markings in various shades of red, brown, purple, and black, on a brilliant yellow ground; beautifully formed flowers on tall graceful stems. Superfine mixed colours	4 0	0 8
Bybloemens , single, with flamed or feathered markings in various shades of red, on a pure white ground; tall and graceful. Splendid mixed colours	5 0	0 9
Florentina odorata (syn. <i>Sylvestris</i>), a British species, bright yellow, delicious fragrance; very early and fine for forcing	5 0	0 9
Greigi , this is undoubtedly the finest of all species of Tulips; it has large, rich, orange-crimson flowers, with black zone surrounding a yellow base, foliage beautifully blotched with rich brown; a species of surpassing beauty and loveliness, each 6d.	—	5 0
Persica (syn. <i>Breyniana</i> and <i>Australis</i>), a charming dwarf very late-flowering species, most effective in the herbaceous border, excellent for edging, flowers bright yellow, brownish crimson outside, wallflower-like perfume, floriferous and hardy	—	3 6
Retroflexa , flower bright golden yellow, of great beauty	6 0	1 0

Mr. W. B. Stainton, The Gardens, Graythwaite Hall, Newby Bridge, writes:—"All the bulbs we have had from you have given us splendid results. The Hyacinths and Tulips were particularly fine."

Mr. H. Jones, The Gardens, Coed-y-Celyn, Bettws-y-Coed, writes:—"I must state that all the Bulbs I had from you this season did splendidly, and were admired by all who saw them. The Single Begonias, especially, were grand, the best strain I ever saw."

17

Daffodils or Narcissus.

DOUBLE YELLOW DAFFODIL.—See page 22.

Of all Spring flowers the Narcissi claim precedence as the most graceful and beautiful, and the extraordinary interest that has been shown in their cultivation and improvement during the past few years is a significant and well-deserved tribute to their wondrous beauty. Their large and increasing popularity, both for indoor and outdoor culture, during the past few years, has resulted in a marvellous reduction in prices. Indeed, in the case of such varieties as Emperor, Empress, Horsfieldi, Barri Conspicuus, Mrs. Langtry, etc., a hundred may be purchased for what, but a few years ago, was the price for a dozen. The practice of planting them extensively in parks, woods, etc., now receiving so much attention, cannot be too strongly advocated, as in such situations they are seen at their best, the beauty of the flowers being enhanced by the green carpet of turf. Many of the earlier varieties are suitable for planting in lawns, but care must be taken that the grass is not cut until after the Daffodil foliage has died down, or the bulbs will rapidly deteriorate. They may be successfully grown in any well-drained, well-worked garden soil, and most of the varieties rapidly make themselves at home in almost any situation. They naturally prefer a fairly rich soil, but under no circumstances should ever have farmyard manure directly applied to them. Almost all the varieties are invaluable for early forcing, and no other class of flowers are so well adapted for naturalisation in grass, shrubberies, under trees, &c. A choice mixture for this purpose we offer on page 22.

The list of varieties offered below could readily be much extended, but the result to our customers would probably be disappointing, as many varieties similar to each other are to be found in the lengthy lists of Daffodils now issued. We know our patrons desire sorts distinct, beautiful, and not high in price, unless distinct. Often it is found that the new kind resembles a variety that might be bought for as many pence as it has cost shillings.

In order to obtain the most satisfactory results with Narcissi, we would specially impress upon our patrons the necessity of early planting. The sooner the bulbs can be got into the ground after the end of August, the more readily will they become established in their new quarters.

Clibrans' Special Collections of Daffodils.

The following selections include the best and most distinct sorts enumerated in the following sections, which are successional in flowering, distinct in form of flower, and of various shades of colour:—

50 Daffodils in 10 choice varieties } 4/-, 5/6 and
(Our Selection) } 7/6

50 Daffodils in 25 choice varieties } 7/6 and 15/-
(Our Selection) }

100 Daffodils in 10 choice varieties } 7/6,
(Our Selection) } 10/- & 15/-

100 Daffodils in 25 choice varieties } 15/-,
(Our Selection) } 21/- & 25/-

NOTE.—We are pleased to state that the leading varieties of Narcissus are again this season offered at very much lower rates. This, we trust, will be an inducement for growers of these lovely Spring flowers to extend their planting, and thereby ensure a grand display of bloom.

To ASSIST AMATEURS in selecting the varieties wanted, this List is divided into Four Sections.

SECTION I.

Magni-Coronati, or large Trumpet Daffodils.

The Flowers of all in this section have the Crown or Trumpet as long or a little longer than the divisions of the perianth.

*Denotes best forcing varieties. Those best adapted for under the shade of trees and naturalisation in grass, marked †.

NARCISSUS BULBOCODIUM (CORBULARIA).

(The Hoop Petticoat or Medusa's Trumpet Daffodils).

For Rockeries, Edgings and Small Beds, these are most charming whilst for Pot-work they are invaluable.

	Per doz.	Each.	
	s. d.	s. d.	
†Nelsoni major, flowers large, divisions broad, pure white, cup golden yellow, slightly tinted orange, late, distinct and attractive, strikingly handsome and distinct	per 100, 6/-	1/-	0 2

NARCISSUS TRIANDRUS (*White Cyclamen-flowered Daffodil*).

	Per doz.	Each.	
	s. d.	s. d.	
Triandrus Albus (Angel's Tears, the snow-white Cyclamen-flowered Rush Daffodil), perianth elegantly reflexed, a graceful and interesting variety of dwarf habit. Plant in sheltered position; also suitable for pots, per 100, 8/6	1	3	0 2

FOR DOUBLE FLOWERED VARIETIES, see following page.

POETICUS ORNATUS.

SECTION III.
PARVI-CORONATI OR SMALL
TRUMPET DAFFODILS(*The True Narcissus*).

The varieties in this section have flowers with the crown less than half as long as the divisions of the perianth.

The small crowned Daffodil or true Narcissus, of which the Common Poeticus is the type; all are very beautiful, and perfectly hardy.

*Denotes best forcing varieties. Those best adapted for under the shade of trees and naturalisation in grass marked †

NARCISSUS BIFLORUS

(*Primrose Peerless Daffodil*).

†Biflorus, pure white, yellow crown, very fragrant, produces two flowers on a stem, grown principally on account of its late blooming, valuable for cutting.

Per 1,000, 22/-; per 100, 2/6; per doz., 5d.

NARCISSUS BURBIDGEI

(*Burbidge's Narcissus, with Saucer-shaped Cup*).

†Burbidgei, divisions pure white, cup yellow, edged richest orange, flowers in March, useful for cutting.

Per 1,000, 20/-; per 100, 2/3; per doz., 4d.

NARCISSUS POETICUS.

(*The Poet's Daffodil or White Star Narcissus*).

†Poeticus (Pheasant's Eye or Poet's Daffodil), a well-known favourite, fine single white, with red crowns, very sweet, invaluable for cutting, late.

Per 1000, 15/-; per 100, 1/9; doz., 3d.

— Extra Large Bulbs,

per 1000, 20/-; per 100, 2/6; per doz., 5d.

*†—ornatus (see Illustration), excellent for cutting, and one of the best, about a month earlier than the type, perianth white with very broad, handsome divisions, eye ruby scarlet, deliciously scented, large flowers, and grand for forcing.

Per 1,000, 30/-; per 100, 3/6; per doz., 8d.

†—poetarum, a real gem, flowers large, very distinct and beautiful, perianth pure white and broad, cup rich crimson, very fragrant, slightly later to flower than Ornatus. Per 100, 3/6; per doz., 8d.

SECTION IV.

Double Flowered Daffodils or Narcissus.

Per doz. Each.
s. d. s. d.

† Double Yellow Daffodil (<i>Telamonius plenus</i>), Double Von Sion, double deep golden yellow flowers, very free bloomer and grand for forcing; also fine for massing in borders, woodland walks, shrubberies, etc., where it should be left undisturbed,			
large bulbs, per 1000, 40/-	per 100, 4/6	o 8	—
† ——— extra large, per 1,000, 55/-	per 100, 6/-	o 10	—
†* ——— Extra Selected Bulbs for forcing, guaranteed to produce at least 2 blooms, per 100, 8/6		1 3	o 2

per 1,000, 25/-	per 100, 3/-	o 6	—
† Incomparabilis, Double (Butter and Eggs), the large double yellow Nonsuch Daffodil, with orange nectary, very free and effective, fine for massing,			
per 100, 4/-		o 8	—
— Orange Phoenix (Eggs and Bacon), the lovely fragrant double white Peerless Daffodil, with orange nectary, large and very attractive, free, fine for cutting	per 100, 5/-	o 9	—
— Sulphur Phoenix (Codlins and Cream), very large, pale creamy white, delicately perfumed, a chaste and beautiful flower for cutting or decorative purposes	per 100, 8/-	1 3	o 2

NARCISSUS POETAZ "ELVIRA."

A new and distinct type, the result of a cross between Poeticus Ornatus and the Polyanthus variety. Each flower-stem bears several blooms of the Poeticus shape and size, and being without the strong and somewhat unpleasant scent of the Polyanthus class, will be much valued for cutting for decorative purposes. The flowers are pure white with a yellow eye, borne on long stems and last well when cut. Equally good for forcing and for outdoor cultivation. Per 100, 10/-; per dozen, 1/6.

MIXED DAFFODILS
OR NARCISSUS.

The following mixtures are composed of the hardiest and best sorts for naturalisation in shrubberies, woodland walks, &c. They will be found to contain varieties from all the foregoing sections, and by reason of their cheapness are strongly recommended for extensive planting where large quantities are required.

Per doz.—s. d.

† A Choice Mixture		
per 1,000, 22/6	per 100, 2/6	o 5
† Extra Choice Mixture,

Jonquils.

These beautiful, sweet-scented, bright yellow flowers are easily grown. They all succeed well in the open ground, though undoubtedly *Odorus Rugulosus* shows to most advantage there. They are also well adapted for pot culture, and for gentle forcing, for which the double form is the favourite.

Per doz.—s. d.

Double, sweet-scented, rich golden yellow, very fine,		
per 100, 6/-	1	o
Single, sweet-scented, deep yellow, handsome, per 100, 3/-	o	6
Campernelle, single, rich yellow, very fragrant, fine for borders	per 100, 3/-	o 6
<i>Odorus rugulosus</i> , large, rich deep yellow flowers, of great substance, cup deeply lobed, fine form, free	per 100, 3/6	o 6

MIXED DAFFODILS OR NARCISSUS.

Mr. C. TINDALE, Head Gardener to Lord Ravensworth, Ravensworth, Gateshead, writes:—"Your Bulbs, I am pleased to say, still retain their high standard of excellence. Those you supplied me with last season were very fine and greatly admired."

Anemones.

The Anemones with their beautiful large double and single flowers and finely-cut foliage, are not so well known as they should be; but a great demand for these splendid flowers would soon spring up if they were grown well, and people discovered for themselves how really beautiful and brilliant they are. For beds, masses, and cutting purposes they are superb, their rich and dazzling colours producing a magnificent display. They are hardy, and remarkably free flowering, and may be grown in any fairly rich garden soil that is moderately well drained. The Bulbs should be planted 4 to 6 inches apart, and 2 to 3 inches deep. If the ground be at all wet or heavy, planting should be deferred till the early Spring.

For several rare and lovely varieties of Anemones, see *Plant Catalogue*.

FULGENS (*Scarlet Wind Flower*).

Perhaps no plant can compete in the early Spring with this splendid variety in beauty and brilliancy. Its flowers are of a dazzling scarlet, and in favoured spots make their appearance as early as the beginning of February. A rich loam mixed with well rotted manure and a moderately moist situation suit it best. The tubers may be planted either in the Autumn or the Spring. They should be left undisturbed for two or three years if possible. Per 100, 8/6; per dozen, 1/3.

NOTE.—Many spurious strains of this beautiful Anemone are offered; we guarantee our stock to be the true single, bright scarlet form.

"ST. BRIGID" (*Irish Anemone*).

The true Aldeborough variety, far ahead of the original type. A beautiful, free-flowering strain of robust habit and growth, producing about 95 per cent. of double flowers in a great variety of colours, from the most brilliant crimson-scarlet to purple and white. The flowers are of immense size, and for cutting purposes are of the greatest possible service, we get them direct from Ireland.

Large Roots, 6/- per 100; 10d. per dozen.

Choice Crocus.

The Crocus is the earliest and most welcome of the more important Spring-flowering bulbs, and has a charming effect during February and March when forced in pots containing from five to twenty bulbs in each, or planted in tufts or groups in shrubberies or flower gardens, among rock-work, or in the grass, and especially when planted by the thousand in large masses and long lines, ribbons, festoons, in carpet or other patterns. They may also be grown in shallow boxes of light, rich soil, and when in flower planted into ornamental baskets, &c. If planted thickly in pots, pans, window-boxes, &c., they produce a grand effect. In beds, of one or several colours, or as edging for borders, lawns, and drives in parks, the brilliant and varied colours—gold, blue, purple, mauve, white, striped, &c.—make a most beautiful and effective display. Plant from the middle of September until the middle of October, about three or four inches deep, and two or three inches apart, in good, well-enriched, light ordinary soil. An open sunny aspect suits them best.

Not less than 500 bulbs will be charged at the 1000 rate.

Chionodoxa—(GLORY OF THE SNOW).

These lovely plants are perfectly hardy, but should be left alone for two or three years, or if possible leave them undisturbed, otherwise if lifted the flower stems and flowers are liable to become weakly and small. Any ordinary garden soil suits them, but they thrive best in deep loam in a sunny situation. They may also be grown in pots for conservatory decoration. After potting plunge in cocoa fibre, and when well rooted, remove indoors.

Gigantea (Grandiflora), entirely distinct, and undoubtedly the finest of the *Chionodoxas*; flowers very large, and of a delicate pale blue colour. One of the most striking early Spring flowers. Per 100, 4/-; per doz., 6d.

Luciliæ, a charming early Spring flower, easily cultivated, and perfectly hardy; flowers of a beautiful sky-blue colour with white eye, produced in long pretty spikes. Per 100, 3/6; per doz., 6d.

Sardensis, somewhat similar to the preceding, but the flowers rather smaller and of a deeper blue colour. Per 100, 3/6; per doz., 6d.

From MR. G. WRIGHT, The Gardens, Chellow Dean, Bradford:—"I am pleased to say that all the bulbs have been good up to the present: we are very pleased with them."

MR. V. WELCH, The Gardens, Bishop's House, Llanishen, writes:—"I am very pleased with everything you sent me; the Roman Hyacinths were very good."

DIELYTRA (DICENTRA).

A well-known plant of easy cultivation, producing its graceful flowers in the open ground in April and May. For early forcing it is invaluable, with its long wreaths of pink and silver heart-shaped flowers and finely-cut foliage, and as it does not require much heat, should be largely grown for table and conservatory decoration. It forms the finest plants when forced gently and kept near the glass. Rich sandy loam is the best compost, and the pots should be well drained. After potting plunge in a cold frame until growth commences.

SPECTABILIS, Extra Strong Imported Roots, per 100, 30/- to 45/-; per doz. 4/- to 6/-; each, 6d. to 9d.

SPECTABILIS ALBA, flowers pure white, very fine, a charming variety. Each, 1/6.

For other varieties see Herbaceous Plant Catalogue.

DEUTZIA.

DEUTZIA GRACILIS.

A valuable shrub for early forcing, producing an abundance of pure white flowers in lovely sprays. It makes a fine decorative pot plant, and the flowers are charming for cutting; fine plants; 6/- and 9/- per dozen.

Extra Strong, in pots, 12/- to 18/- per doz.; each, 1/6 to 2/-

DEUTZIA HYBRIDA LEMOINEI.

Most distinct and handsome addition to this family. The flowers are pure white, well opened, and produced in the greatest profusion. As a forcing plant we believe it will soon supersede the old favourite Gracilis. 1/6 each.

DEUTZIA, PRIDE OF ROCHESTER.

A handsome double white-flowered variety, useful for forcing or garden decoration, 1/6 each; 12/- per doz. Smaller, 6/- and 9/- per doz.

For Complete List of Deutzias see Shrub Catalogue.

FREESIAS.

The rich flora of the Cape of Good Hope has yielded us no lovelier or sweeter-scented bulbous plants than the Freesias, which have rapidly risen in public favour. The varieties offered are the finest and most distinct, and are admirably adapted for pot culture. They are very valuable for supplying cut bloom during the Winter and Spring months, and when cut they retain their beauty and perfume a long time.

Customers having complained at different times that they do not succeed with their Freesias, we offer a few suggestions which if intelligently followed out will give satisfactory results.

Freesias may be got in bloom from December to April, without any trouble if they are planted in successive batches, say from July to October, in good loamy soil with an admixture of leaf mould and sand. The early batches should be kept out of doors till the cold weather sets in, must of course be watered in dry weather and kept growing all the time that they may thoroughly establish themselves. They should then, say about October, be put under frames, or in an airy house, and kept close to the glass to maintain a sturdy growth but protected from frost. The early planted batches will be ready to put into gentle heat in November, when they will flower in December, successive batches should then be brought into heated house to keep up the supply of bloom. Nine failures out of every ten in growing Freesias, and other Cape Bulbs, including early Gladioli, are caused through bringing the Bulbs in a warm house sometimes as soon as planted, or, at all events, before they are thoroughly well established and flower buds coming away. In common with all other Bulb forcing they resent this treatment, throw up weak foliage and spindly flower spikes, that cannot under any circumstances please the purchaser or the seller.

Leichtlini major, pale primrose with orange blotch, sweet-scented, per 100, 5/-; per doz., 10d.

Refracta alba, pure white, with rich yellow blotch on lower petals, exceedingly fragrant, per 100, 4/6 per doz., 9d.

— — — Specially Selected Bulbs, per 100, 6/6; per doz., 1/-

FREESIAS.

MR H. BISHOP, The Cottage, Swallowfield, Horwich, writes:—"Bulbs etc. to hand which give great satisfaction."

Gladioli.

EARLY FLOWERING VARIETIES.

In bloom from June to August.

For grace and beauty these compare favourably with any other section of the Gladiolus. They embrace the most delicate and beautiful combinations of colour, are of dwarf branching habit, free blooming, flowering from June to August, or by gently forcing will bloom in April or May. They are specially adapted for growing in pots for conservatory decoration in the spring and early summer, as well as for general effect in the open borders, their bright and rich colourings making them very effective in the flower garden, or when cut for decorative purposes. These are very suitable for planting in beds, shrubberies, woodland walks, &c., and being cheap a grand display may be had at a small cost. *Colvilli alba* (The Bride) is a beautiful variety, and the best for forcing and cutting. For out-door culture, plant the bulbs from October to December in a sunny position, mixing plenty of well-rotted manure with the soil.

GLADIOLUS COLVILLI ALBA (THE BRIDE).

Gladiolus Princeps (New).

(The best and largest Gladiolus in existence.)

This magnificent variety is the largest and most effective and graceful of all Gladioli. It grows from 3½ to 4 feet high under ordinary garden conditions; its handsome foliage is a grand setting for the brilliant Amaryllis-like blooms which open more widely than any other variety. The colour is rich crimson with intense shadings in the throat and broad white blotches across the lower petals. The flowers range from 5 to 6 inches in diameter, and can be grown to nearly 8 inches under stimulating culture. The petals are very wide and much rounded, forming an almost circular flower. From three to six of these immense and brilliant blooms are expanded at a time on each spike, which often produces 16 to 18 flowers during its development. It endures the sun and wind well, and opens perfectly to the last bud in water. It blooms normally in August, but may be had late in October by delaying planting it. It is also a splendid forcing variety. Strong Bulbs, 1/- each.

GLADIOLI—continued.

AUTUMN FLOWERING VARIETIES.

This fine genus is well known in gardens in the numerous and splendid varieties commonly known as Gandavensis hybrids. Their very beautiful and distinct features, and their colours gorgeous and chaste, comprising many shades of red, white, yellow, purple, and combinations of these in the different varieties, need not be enlarged upon here, they are so familiar to all lovers of flowers, and the uses to which they are adapted to the embellishment of gardens are no less familiar and well understood. In mixed arrangements of colour they are indispensable, and for back lines of large mixed borders, the centres of large beds, background lines for masses of colour, as well for planting amongst low-growing shrubs, there are few of the gifts of Flora more suitable in all respects than the vigorous growing varieties of the type above named. They are perfectly hardy, and succeed in almost any ordinary garden soil, but give the best results if planted in a sunny position in a rich well-manured soil. The beds should be prepared in the Autumn, digging in deeply plenty of well-rotted manure. Planting should be done at the end of March or early in April, placing the bulbs 4 inches below the surface, and 9 to 12 inches apart, the rows being 1 to 1½ feet from each other. When they are in full growth give plenty of water and occasional applications of liquid manure. Lift in Autumn when the leaves are beginning to die down, and store the bulbs away in a dry place until planting time. Gladioli are grand for cutting purposes, and the spikes keep fresh in water a considerable time.

BRENCHLEYENSIS.

Flowers brilliant scarlet; hardiest of all; a showy and most effective variety, should be extensively planted.

Extra Selected Bulbs, per 1,000, 75/-; per 100, 8/6; per dozen, 1/3.
Usual sized Bulbs, per 1,000, 60/-; per 100, 6/6; per doz., 1/-

CHILDSII.

This is the most important and valuable floral introduction which this generation has seen, and one which will completely revolutionize and bring into still greater importance the Gladiolus. The flowers are of great substance and of gigantic size, frequently seven to nine inches across. The form of both the flower and spike is perfection itself, and they last a long time in bloom before fading, owing to their great substance and vigour; but the most striking feature is their colouring. Orchids cannot surpass them in varied and delicate shades, marking and blendings. Every colour known among Gladiolus is represented, and many never before seen, particularly blues, smoky greys and purple-blacks, all having beautifully mottled and spotted throats made up of white, crimson, pink, yellow, etc., and in this peculiar network of charming spots and colours lies one of its special points of unsurpassed beauty.

Finest Mixed Hybrids, per 100, 9/-; per dozen, 1/6; each, 2d.

CHOICE SEEDLINGS (Hybrids of Gandavensis).

Few flowers are more showy and beautiful than this section which comprises almost every shade of colour unequalled for richness and brilliancy. They may be grown out of doors in any ordinary garden soil, and are admirably adapted for grouping amongst evergreen plants.

Choicest Mixed Colours, per 100, 10/-; per dozen, 1/6.

GANDAVENSIS (Named Hybrids).

For List of Varieties, see Spring Catalogue.

LEMOINE'S HARDY HYBRID SPOTTED.

This comparatively new race is often described as Butterfly Gladioli. They are earlier than the Gandavensis section and much harder. Though their bulbs need not be lifted in winter, it is better to do so if there be wireworm in the garden. The colours are rich and exceedingly varied, and the large blotches on the lower petals suggest their characteristic name of Butterfly Gladioli. They come into bloom between the Early-flowering and the Gandavensis section. Several of them have received First-class Certificates from the Royal Horticultural Society.

Finest mixture, per 100, 6/6; per dozen, 1/-.

SNOW WHITE.

Said to be the best white Gladiolus for forcing or out-door culture. Flowers well formed, of exceptional substance, lasting a remarkable length of time when cut. Every flower on the spike can be used individually for cut-flower work. If the spikes are cut when the first two or four lower flowers open, and are allowed to develop in water, it is positively snow white.

Fine Selected Bulbs, each 1/6.

NANCEIANUS (New Hybrids).

A superb new race of Gladiolus of the Gandavensis class, of vigorous growth and hardy constitution, succeeding well in any ordinary situation. They produce fine erect spikes of handsome well-expanded flowers which are of enormous size, with a most pleasing and varied range of colours of unsurpassed beauty.

Finest Mixed Hybrids, per 100, 12/6; per dozen, 1/9.

IRIS.

In the flowers of these charming plants we have as beautiful combinations of colours as are to be found amongst Orchids, and they only require to be more generally known to be appreciated by all lovers of hardy plants ; their flowers are produced in great profusion, and are of large size and beautiful form.

IRIS HISPANICA (*Spanish Iris*).

Slightly earlier than the English Iris, but more slender in habit. The flowers are of great substance, and are the best of all bulbous Irises for cutting purposes, lasting a long time in water. Their extraordinary beauty and the marvellous richness and variety of their colouring, ranging through all shades of purple, violet, blue, orange, white, and subtle combinations of bronze, old gold, russet brown, deep brownish purple, olive-green and lurid sea-green, give them a totally unique position in the flower garden, and have led to many comparisons between them and a collection of tropical Orchids in full bloom. In spite of their exceptional cheapness every bulb may be expected to bloom. They show a natural preference for a fairly rich sandy soil. The following are a few of the best and most distinct varieties in the Spanish class :—

Lily of the Valley.

A SPECIALTY.

The delicious fragrance, combined with the snowy whiteness of the flowers, has made the "Lily of the Valley" a favourite flower with everyone. Its adaptability to all purposes, and for all occasions when flowers are required, and its excellent lasting properties when cut, are points wherein it is unexcelled.

We have for a considerable time made a speciality of "Lily of the Valley." We grow it by the hundred thousand for our own cut-flower trade, and our long experience in this connection enables us to select those crowns that are most likely to give satisfactory results. The crowns we supply to our customers are identical with those we use for our own flower trade, and may be expected, with ordinary care and attention, to produce spikes equal in every respect to those illustrated on this page. The imported clumps and crowns of "Lily of the Valley" are much superior in size, fragrance, and profusion of bloom to the home grown. For all forcing purposes and early forcing in particular, they are highly recommended. To ensure the best results special care should be taken not to allow the roots to get dry, as the crowns will go "blind," and fail to produce flowers. Immediately the crowns are received untie the bundles, plant in sand outside, and water thoroughly. The crowns and roots should always be kept moist, as the least dryness is detrimental.

For the successful forcing of "Lily of the Valley" the crowns should be thickly potted, 12 to 18 crowns in a 5-inch pot, keeping them well above the soil: they should then be placed in bottom heat, where a temperature of 80 to 90 degrees is maintained, covered with a little moss or cocoa-nut fibre, and kept well supplied with tepid water, care being taken that they are never allowed to become too dry.

Strong Clumps, for forcing, specially selected, per doz., 9/- to 10/6; each 1/- to 1/3.

Strong Single Crowns, the true Berlin variety, much superior to the Dutch, extra quality; per 1,000, 45/- to 50/-; per 100, 5/- to 6/-; per doz., 1/-

Retarded "Lily of the Valley."

Since the introduction of the retarding process and its application to plants and bulbs, it is now possible to have "Lily of the Valley" in bloom throughout the year.

Special Retarded Early Flowering Crowns.—These are extra fine roots for very early flowering, and may be had in bloom at any date throughout the year. The flowers are large, and of the finest quality, the foliage being produced simultaneously with the flower spike, is a great advantage. As the roots require extra care in selection and special preparation they cannot be sent to customers until three weeks before they are required to be in flower. Therefore, in ordering, please state the date on which the roots should bloom. The crowns should be potted immediately on arrival.

These Retarded Crowns can be grown without any bottom heat, and will flower in a cool greenhouse or conservatory within 3 or 4 weeks from the time of potting. They are thus especially suitable for the amateur.

Extra Strong Single Crowns	per 1,000, 60/-; per 100, 6/6; doz.	s. d. 1 0
Carefully Selected Crowns , picked over after removal from refrigerators	per 1,000, 70/-; per 100, 7/6; per doz.	1 3

MR. J. WALKER, The Gardens, The Chalet, Oxtou, writes:—"The Lily of the Valley arrived to-day in good order and we are very well pleased with them."

MR. JOSEPH ATKINSON, The Gardens, Whinney House, Gateshead, writes:—"All the Bulbs supplied by you last autumn have been splendid; I never had better Roman Hyacinths or Lily of the Valley."

LILIUMS.

Among bulbous plants the *Lilium* stands unrivalled for the embellishment of the greenhouse or conservatory. Many of the species and varieties also make excellent border plants, and when planted among shrubs, such as Azalcas, Rhododendrons, &c., their stately habit and beautiful, varied coloured, fragrant flowers produce a grand effect. They do not like being disturbed, and should be planted where they can remain for several years. For greenhouse purposes a few selected bulbs of choice varieties should be potted or planted early in the Autumn, when they are at rest, and grown on so as to bloom in succession. Loam and peat in about equal proportions, with a small quantity of sand added, will grow them well. If manure be used in the compost it should be old and limited in quantity. After potting plunge the pots 6 inches deep in damp cocoa fibre, withholding water from the pots until top growth has commenced; place in a cold pit and protect from frost, removing to the greenhouse or conservatory as required. When coming into flower liquid manure may be given them with good result. Re-pot with fresh soil as soon as the stems have died down.

Those marked thus (*) are most suitable for greenhouse and conservatory decoration as well as for outdoor culture. Each—s. d.

LILIUM.

- Each—s. d.
- * *Auratum* (the Golden Rayed Lily of Japan), white, spotted crimson, pale yellow band down centre of each petal; strong bulbs ... per doz., 7/6, 9/6, and 10/6 1 0

12 Bulbs, in 6 to 12 fine varieties, for 8/-, 12/-, or 18/-, our selection.

OTHER SPECIES AND VARIETIES AT ADVERTISED PRICES.

RANUNCULUS.

This is one of the most beautiful flowers of the garden for beds, masses, &c., and being free flowering is much prized for cutting purposes. For its successful culture it should have a deep moist cool soil, enriched with well decayed manure. It should be planted as soon after the beginning of February as practicable, in rows six to eight inches apart, two or three inches deep, and two inches between the tubers—placing the claws downwards. In April and May, should the weather be dry, they should be watered freely two or three times a week, as a successful blooming depends on maintaining a uniform moist surface in dry seasons. Protect from severe frost and heavy rains with a covering of cocoa-fibre or litter, which should be removed before the growths have pushed through the soil. Lift the tubers when the foliage turns yellow, dry them gradually, and store away in a dry place until planting time. The *Persian* varieties are not quite so hardy as the *Turban*, but all are lovely and effective.

SCILLAS.

All the species and varieties of this genus are beautiful, and produce an abundance of flowers, often when snow is on the ground. They are charming when planted in combination with Snowdrops, the intense blue of the Scilla showing to great advantage mingled with the pure white of the Snowdrop, for edgings, or masses in small beds, window boxes, &c., and equally so when grown in pots for conservatory decoration. They are quite hardy, and succeed in any good garden soil. Plant early in Autumn, and place the bulbs 3 inches apart.

SNOWDROPS (GALANTHUS).

GALANTHUS; ELWESII.

Snowdrops succeed in any soil, and can be grown successfully anywhere, and though seemingly most delicate and fragile flowers, are in fact amongst the hardiest known to our gardens. They are admirably adapted for massing or edgings to beds, borders, &c., for naturalising in grass and shrubberies, and for associating with Scillas, Chionodoxas, Crocus, and other early flowering bulbous plants. They should be planted from October to December, in clumps, at a depth of three or four inches, and left undisturbed for years. For planting in grass, dibble holes 12 to 18 inches apart, and place a little fresh soil and two or three bulbs in each hole. The Double variety is as hardy as the Single, and the best for growing in pots.

<i>Elwesii</i> , a distinct and beautiful species, with broad pure white segments, and rich emerald green and white tube. The flowers being large and with long stems, are invaluable for cutting. This variety so quickly forms a large clump, and flowers so freely, that it is deserving of extended cultivation			

in the herbaceous borders or on the rockery. One of the most beautiful of all bulbous plants for growing in pots when protected from being soiled at the flowering season	per 1,000, 25/-	2 9	0 6

Spiræas.

Spiræas have within the past few years become almost universal favourites. Their ornamental foliage, compact yet elegant habit, and the great abundance of their handsome plume-like flower spikes render them exceptionally valuable as decorative plants for rooms and conservatories, while the gracefulness of all their parts make them specially useful for cutting purposes generally. Their cultural requirements are very simple, and so long as they have sufficiency of light and moisture, with protection from frost, they almost invariably do well. The clumps offered are specially grown for forcing, being thickly set with growths containing flowers. They should be potted as soon as received in any good garden soil, in six to nine inch pots, well watered, and placed in a cool frame or outdoors until well rooted, protecting from frost by a covering of ashes, cocoa fibre, or sand, after which they may be taken to a warmer temperature for forcing into flower as required. They require a moist atmosphere and an abundance of water when forced, and should be placed in saucers of water during growth.

New Pink Varieties.

QUEEN ALEXANDRA.—Deep pink, free bloomer and forces well ... 1/6 & 2/- each; 15/- & 18/- per doz.

PEACH BLOSSOM.—Clear blush pink, compact spike, forces well ... 1/6 & 2/- each; 15/- & 18/- per doz.

(The above Novelties have been awarded the Royal Horticultural Society's Gold Medal).

PRESS OPINIONS.

The Florists' Exchange:—

"Among the finest of recent novelties are the crosses between *Spiræa Compacta* and *Astilbe Chinensis*; this cross has given rise to pink flowers. The plants were from 2½ to 3 feet high, and were much superior to anything previously seen in Spiræas."

The Horticultural Advertiser:—

"The most important Novelties in the whole Show by common consent were the grand new Spiræas to which the Floral Committee awarded a Gold Medal.

For names and descriptions of many other beautiful Spiræas see Catalogue of Herbaceous Plants.

Bulbs for Naturalisation

IN

PARKS, WOODLANDS, WILD GARDENS, SHRUBBERIES, &c.

The increasing practice of planting bulbs extensively in Parks, Woodlands and small Plantations, induces us to draw more special attention to this form of *natural* gardening. Daffodils, Narcissus, Snowdrops, Crocus, Scillas, &c., growing amid such surroundings are seen at their *best*, and have a charm which is not to be found in the more conventional beds and borders of the cultivated garden. They can be left undisturbed for years, and will rapidly increase in numbers as they become naturalised, so that each Spring enhances the general effect. The following varieties will be found to be the best for this purpose. We shall be pleased to quote special prices for larger quantities.

DAFFODILS.

GENERAL LIST OF Miscellaneous Bulbs.

We have placed the following list in alphabetical order so that any variety wanted may be the more readily found. Many uncommon and most beautiful species are offered to the notice of those in search of rare and lovely bulbous plants.

N.B.—Orders which embrace late ripening Bulbs will be executed in two parts—viz., the early ripened Bulbs will be forwarded on receipt of order, the late ripened ones following on their arrival later in the season.

Some rare varieties cannot perhaps be lifted until very late in the season, and may not reach us until the end of the year, or even early next year. We mention this *in case* any should not be received until late. But as the stocks of some are limited, orders should reach us early.

ACONITE, WINTER (*Eranthis hyemalis*).

One of the earliest hardy dwarf Spring-blooming plants; rich golden yellow flowers, contrasting well with its bright green foliage. Grows in any ordinary soil, and thrives well under trees and even in a dense shade. Extra large, per doz. 6d.; per 100 2/6; 1,000 18/-

ADONIS VERNALIS.

A beautiful Spring flowering plant, with large star-shaped clear yellow flowers, quite hardy; very effective and early bloomer. It grows freely in any soil, and is best when well established. 4d. each; 3/- per dozen.

AGAPANTHUS.

An easy cultivated, valuable, and showy greenhouse decorative plant, throwing up immense trusses of beautiful flowers in Summer and Autumn. The white variety (*Umbellatus albus*) is a gem. Pot firmly in rich sandy soil.

Umbellatus, the well-known African Lily, with bold clusters of bright blue flowers on long stout stalks; likes a rich compost, abundance of water in the growing and flowering season, and rest during the Winter 1/- each
 — **albus**, stately and beautiful 1/- each
 — **variegatus**, with finely striped foliage 1/6 each

ALLIUM.

Attractive hardy Spring-flowering plants, of the easiest culture, succeeding in any soil and situation, and particularly adapted for borders, rockwork, &c. Millions of blooms of *Neapolitanum*, are used annually; *Hermetti Grandiflorum* and *Triquetrum* are also grand forcers, and deserve to be better known.

Hermetti grandiflorum, large, pure white, inodorous, forces well per doz. 4d.; per 100 2/-
Moly, bright yellow flower clusters; lasting in bloom a considerable time per doz. 6d.; per 100 2/6
Neapolitanum, flowers white, fine for cutting; can be had in bloom by Christmas. Grown extensively for
 Covent Garden Market; excellent for naturalising per doz. 6d.; per 100 3/-

ALSTREMERIA (*Peruvian Lilies*).

These beautiful hardy, Summer-flowering border plants succeed best in a loamy, well-drained soil, the golden variety (*Aurantiaca*) preferring a damp situation. Their lovely *Gladiolus*-like spikes of bloom are very ornamental in the herbaceous border, or when grown in pots for indoor decoration, and are invaluable for cutting. When grown outdoors they do best if planted six to eight inches deep and left in the ground undisturbed for several years.

Aurantiaca (flavum), golden yellow, streaked crimson, very showy; perfectly hardy per doz. 1/6; each 2d.
Psittacina (parrot-like), flower bright crimson at the base, passing to a greenish tint spotted with purple per doz. 1/6; each 2d.
Mixed Varieties per doz. 1/6; each 2d.

AMARYLLIS (*Hippeastrum*)

A beautiful class of plants, their large and lily-like blossoms, of various colours have a telling effect when mixed with dwarfier plants. A mixture of loam, leaf-mould, and well-rotted manure with some coarse sand is the best compost, and the pots should be well drained. Start the bulbs in heat, and when in growth water freely, and apply weak liquid manure occasionally. After flowering, water sparingly until quite dry, then store away under the stage until new leaves appear.

	Each—s. d.
Aulica , of strong growth, nearly evergreen, with long strap-shaped leaves, and large brilliant crimson flowers, green at the base	1 6
Belladonna , delicate silvery rose; may be grown out of doors if planted on a warm sheltered border ... 5/- doz.,	1 6
— major , dark rose and white ... 1/- and	1 6
Equestris , a beautiful and grand old species, a very profuse bloomer, colour orange-scarlet, white throat, with a band of white down the centre of each petal ...	1 6
Formosissimus (Jacobean Lily), colour rich dark crimson; flowers in May per doz., 5/-	0 6
Johnsoni , deep red, with white stripes, very free	2 6

	Each—s. d.
Purpurea (<i>Vallota</i>), Scarborough Lily, large umbels of dazzling scarlet flowers, remarkably free blooming, 1/6 to	2 6
Reticulata (Mrs. Garfield), rosy pink, netted and veined darker tint, the centre of each petal striped white, producing a charming contrast to the numerous erinon-scarlet varieties	3 6
— striatifolia , pinkish lilac, with white network and pure white stripes; foliage dark green with an ivory white mid-rib 1/6 &	2 6
Seedlings , splendid flowers, brilliant colours, extra selected varieties, from large-flowered named sorts, per doz. 18/- & 24/-	
— specially selected to colour, extra fine 2/6, 3/6 &	5 0

ANOMATHECA.

Cruenta, beautiful crimson Ixia-like flowers freely produced in dainty sprays. Require the same treatment as Freesias, with which they form a most charming contrast. Admirably suited for outdoor cultivation. Of easiest possible culture. Per 100, 3/6; per doz., 6d.

ANTHERICUM.

Graceful perennials for mixed borders, &c., throwing up long elegant spikes of pure white sweet-scented Lily-like flowers, free and hardy. Should be in every collection of hardy flowers, as they succeed in any ordinary soil.

Liliago (*St. Bernard's Lily*), flowers 1½ inch across, very free-flowering, 3/- per doz.; 4d. each.

Lillastrum major (*St. Bruno's Lily*), flowers 2 inches across, delicately tipped with green, 4/- per doz.; 6d. each.

ARUM.

Singular and effective plants, preferring a warm sunny border. Grow well in pots. A mixture of sandy loam and peat is the best compost. Winter protection from frost is advisable.

Crinitum (*Dragon's Mouth*), flower most grotesque, stem beautifully marbled, spathe reddish brown, 7/6 per doz.; 9d. each.

Dracunculus, palm-like leaves, large deep chocolate spathe, stem and leaf-stalks flesh-coloured, deeply mottled black, quite hardy, handsome and effective, 4/- per doz.; 6d. each.

Italicum, spathe greenish yellow or white, handsome foliage in early Spring, showy clusters of scarlet berries in Autumn, a most serviceable plant for shrubby borders, 2/- per doz.; 3d. each.

BEGONIAS: TUBEROUS ROOTED. CLIBRANS' STRAIN.

Continued and careful fertilisation and selection aided by skilful cultivation spread over a period of many years has resulted in making our strain of Tuberous Rooted Begonias of the highest excellence. Our aim has been to produce a dwarf, sturdy and compact habit, freedom in the production of large flowers in clear and well-defined colours and shades carried upright on stout stems. As conservatory plants Begonias have, perhaps, no equal. In Summer, with the simplest treatment, they bloom continuously. As "bedding plants," we know no plant, generally classified under this heading, that can be grown with less labour, and when in flower they are uninjured by wind or rain, and remain a glowing sheet of colour until cut down by frost.

DOUBLES.

Choice unnamed Double Varieties, to colour, 1/-, 1/6 to 2/6 each; 9/-, 12/-, 18/- and 24/- per dozen.

Mixed Seedlings, unbloomed, containing a large percentage of doubles, 6/- and 9/- per dozen.

Seed of this Superb Double Strain, 2/6 per packet.

For Choice named Varieties see Indoor Plant Catalogue.

SINGLES.

Crimson, Scarlet, White, or Yellow, 4/6 per dozen; 30/- per 100.

Red, Pink, Rose, Blush, or Salmon, 4/- per dozen; 25/- per 100.

Mixed Singles. 2/6 per dozen; 17/6 per 100.

Extra Fine Selected. 6/-, 9/- and 12/- per dozen.

Seed of this Superb Single Strain. 1/6 and 2/6 per packet.

HYBRIDA CRISTATA.

(*Crested or Bearded Begonia*).

This is one of the most interesting types of the Tuberous Begonia. The flowers are of large size and excellent substance, embracing a wide range of colours. Their distinguishing characteristic consists of a beard, or crest, growing from the base and adhering to the centre of the inner side of each petal, giving the flower an attractive and unique appearance. Dry Tubers in choice selection of colours.

9d., 1/- to 1/6 each; 6/-, 9/- and 12/- per doz.

BULBOCODIUM.

Vernum, beautiful dwarf March-blooming plants, and good for masses or for margins; their deep purple Crocus-like flowers affording a pleasing contrast to Snowdrops. They succeed in any good ordinary soil per dozen, 2/-

CALLA (RICHARDIA).

Popular plants for greenhouse, conservatory, or table decoration.

Æthiopica (*Lily of the Nile*), pure white trumpet-like flowers, grand for Christmas and Easter decorations. In pots ... each, 1/- to 1/6.

— **The Godfrey**, spathes are whiter, and produced earlier, and in greater numbers than in *Æthiopica* ... 1/- to 1/6

"Perle Von Stuttgart", pure white flowers, produced with the utmost freedom, of compact and vigorous habit. In pots ... each, 1/- to 1/6.

For other species and varieties see Indoor Plant Catalogue.

CALLA.

CALOCHORTUS.*(Californian Butterfly Tulip or Mariposa Lily).*

This group contains some of our gayest and most beautiful bulbs and, is one of California's most beautiful *genera*. The flowers are produced in June and July, and resemble a Tulip somewhat in shape, the brilliant colours ranging through various shades of white, lilac, blue, crimson, yellow, &c., some being wonderfully spotted and veined, and edged or tipped with gold. They succeed well when grown in pots. Should be protected from excess of moisture in Winter if grown in the open ground. Plant outdoors in a sunny position in a light sandy soil.

Mixed, first-class bulbs consisting of all the best varieties, 2/6 per doz., 3d. each.

CAMASSIA ESCULENTA (*Quamash or Camass Root*).

A showy hardy border plant, closely allied to Scillas, with large handsome spikes of dark blue flowers, blooming in July and August; fine for massing, any light soil suits them. 6d. per doz.; 3/6 per 100.

CANNAS (*Gladiolus-Flowered*).

Their spikes resemble Gladioli, and their brilliant colours show grandly against the tropical-like foliage; they bloom continuously during the Summer. The foliage is broad and massive, and comprises various shades of rich green, glaucous and chocolate-crimson tints, giving a beautiful and tropical aspect to pleasure grounds. When planted in groups on lawns or in the centre of beds—in warm or sheltered situations—they form most effective objects during the summer months. They are also fine for conservatory decoration, and can be kept growing and flowering during the Winter. Cannas are entirely free from insects and disease. After flowering they may be treated similarly to Gladioli and Dahlia tubers.

Twelve in 12 Fine Varieties, our selection, for 9/- and 12/-.

Ordinary Varieties, our selection, 4/-, 6/- and 9/- per dozen.

For list of sorts see Indoor Plant Catalogue, post free on application.

Our Collection is thoroughly up to date; each year we add the Finest Novelties by all the best Raisers.

CHRISTMAS ROSE (*Helleborus*).

A well-known favourite hardy herbaceous plant, producing its beautiful pure white flowers at Christmas and during the winter months when flowers are very scarce. They grow well in any ordinary garden soil, but prefer a moist, shady situation. With the assistance of a few hand-lights, bell glasses, or squares of glass, at the flowering season the blooms can be kept clean and beautiful. They may also be grown in pots, and flowered in a cold greenhouse or frame.

Niger Angustifolius. This variety is probably the finest of all for garden decoration, large pure white flowers freely produced 1/6 to 2 6

Each—s. d.

Niger Maximus (*Altifolius*) (Miss Hope's variety), another splendid pure white variety of *Niger* much superior to the type 1/6 to 2 6

Each—s. d.

For complete collection of *Helleborus* see Catalogue of Herbaceous Plants.

COLCHICUM (*"Meadow Saffron."*)

The pretty great *Crocus*-like flowers carpet the ground during the shortening days of Autumn, when the brightness of the Summer flowers is on the wane, and make grand subjects for naturalising in grass, &c. They are very hardy, and any ordinary soil suits them. Plant the corms about 3 inches deep early in Autumn. Orders for these should be sent us early, so that they may be forwarded before they come into flower.

Autumnale, Finest Mixed ... per 100, 14/-; per dozen, 2/-

CROWN IMPERIALS.*(Fritillaria Imperialis.)*

Majestic hardy early-blooming border plants with a crowning whorl of beautiful drooping bell-shaped flowers. They are suitable either for mixed borders or the front of shrubberies, but wherever planted should have a sunny situation where they can be left undisturbed for years. They succeed well in any good, light, well-drained garden soil. For pot culture one bulb should be placed in a 6-inch pot, and grown on in a low temperature. Fresh manure of any kind is very injurious.

Mixed Colours, extra fine, per doz., 3/-; each, 4d.

CYCLAMEN.

The corms of *Cyclamen Persicum* we offer are our own raising from seeds saved from the finest large-flowered varieties in cultivation. The blooms are of enormous size, thrown well above the foliage, and are of the brightest and most diversified shades of colour possible. For profuseness of bloom, combined with robust growth, this strain is unrivalled. The corms should be potted in August or September. The best compost is a mixture of good loam, leaf mould, sandy peat, and well-rotted manure. Water should be given sparingly until the growth has commenced, after which it should be given more liberally. Weak liquid manure may be occasionally applied, but in doubtful cases it is best to reserve it until the flower buds make their appearance.

Persicum (*giganteum strain*), young plants in 3 in. pots, from April to July, 2/6 doz.; 18/- per 100.

—larger bulbs, in 5 in. pots, 6/- and 9/- per doz.

—in Autumn, plants in buds and bloom, very fine, 12/-, 18/- and 24/- per doz.

Choice Mixed Seed, 1/6 and 2/6 per packet.

CROWN IMPERIALS.

CONVALLARIA (POLYGATUM) MULTIFLORUM.—(*Solomon's Seal*.)

A graceful decorative plant, 2 to 3 feet high, closely allied to Lily of the Valley, equally adapted for forcing for the Conservatory and indoor decoration, and for planting out in the herbaceous border. The long arching leafy stems, with their drooping clusters of dainty flowers, are valuable for cutting purposes. Per dozen, 3/-; each, 4d.

CRINUM.

For Names of leading Varieties see our Catalogue of Indoor Plants.

CROCOSMIA AUREA.—(*See Tritonia*.)**CYPRIPEDIUM.**

For Names and Prices, see our Herbaceous List.

DOG'S TOOTH VIOLETS. (*Erythronium*.)

Beautiful hardy, early Spring blooming plants for the front of mixed borders, beds, clumps, &c.; leaves quaintly marbled and spotted; flowers somewhat resembling the Cyclamen. They succeed in any ordinary garden soil, and should be planted in October. If required they may be grown in pots for indoor decoration.

FRITTILLARIAS.

Beautiful hardy border plants of dwarf habit and blooming in Spring, throwing up slender stems about two feet high, with bell-shaped flowers beautifully chequered and curiously marked; very suitable for the border and rockwork, and easily grown in pots.

Aurea, a most lovely gem. Flowers equal in size to those of <i>F. meleagris</i> ; colour bright golden yellow both inside and out, with numerous small black tessellations. It is quite hardy, and makes a charming pot plant, per doz. 2/-	0 3
Meleagris (Snake's Head), choice mixed ... per 100 4/-; per doz. 9d.	0 0

GLOXINIA.

12 fine named varieties, our selection, 6/-, 9/-, and 12/- per doz. Unnamed Seedlings, mixed, 5/- per doz.
Seed saved from our own superb collection, 1/6 and 2/6 per packet.

HEMEROCALLIS (Day Lilies).

Very showy, leaves very long and narrow, all rising from the base; flowers large, in fine clusters, grow in almost any soil, excellent for shrubberies, borders, and pots; greatly valued for cutting. For varieties see Herbaceous List.

HYACINTHUS.

Candlecans (*Galtonia Candicans*), plant any time from November to March in any good garden soil on a sheltered border, where they are exceedingly ornamental. The flower stems are produced in July and August, and carry 20 to 25 large pendulous bell-shaped white flowers. Per 100, 6/6; per dozen, 1/3.

IXIA (African Corn Lily).

No other species of bulbous plants exhibit such a variety of brilliant colours for house or general decoration. They are invaluable as cut flowers, and on that account should be extensively grown. Pot the bulbs thickly in the Autumn, afterwards place in a cold frame or greenhouse. They may be planted outdoor from October to December, in sunny sheltered spots, in a light loamy soil, with a protection of cocoa-nut fibre to preserve them from severe frosts.

Choice Named Varieties	per 100 6/-; per doz.	1 0
Finest Mixed Varieties	" 2/- "	0 4

LACHENALIA (Cape Cowslip).

Six or seven bulbs planted in a 7-inch pot afford a charming change to ordinary conservatory plants. The cultural directions are of the simplest. Pot, whenever growth commences, in a little sandy peat and loam, and water freely so long as the leaves are green, but no longer. When the pots are full of roots they stand gentle forcing. For outdoor culture they require a warm sheltered situation, and, not being quite hardy, should be protected in winter.

MONTBRETIA (Tritonia).

An exceedingly graceful Summer and Autumn flowering group, with tall slender freely-branching spikes, and flowers like a miniature Gladiolus, but much more artistic; prevailing colours brightest yellow and vermillion; of exceptional value for cutting and for decoration generally. They are very free, hardy, and showy, succeeding best in a rich light soil in a sunny position.

(Copyright).

New Imperial Montbretia, "KOH-I-NOOR."

The flowers of this splendid novelty are unusually large and strikingly attractive, of rich pure orange on bright apricot base, a glorious flower of most perfect shape, and opening quite flat immediately, and on strong and erect stems. A strong and robust plant of great vigour unexcelled by any variety in cultivation. The petals of the flowers are broad and well shaped, the many side branches on the plant cause the number of flowers to be at least three times as many as of any of the old sorts, and it is therefore going to be the best paying market flower of any of the Montbretias. **Price 6/- per doz. 8d. each.**

Paneratium (Spider Lily).

Beautiful stove and greenhouse plants, very free-flowering, and invaluable for bouquets and decorative purposes. They do best in rich loam and leaf mould, with a little well-rotten manure and some sand. All the varieties offered have pure white flowers.

	Each.—s. d.
Fragrans , very showy and graceful, sweet-scented, in pots	2/6 to 3 6
Maritinum (<i>The Sea Daffodil</i>), flowers in large umbels, very fragrant, nearly hardy	1/- to 1 6
Speciosum (syn. <i>Hymenocallis speciosa</i>), very fragrant, especially in the evening; handsome broad deep green foliage	2/6 to 3 6

Oxalis (Wood Sorrel).

Free-flowering pretty dwarf half-hardy plants, suitable for the open border or pot culture. A light sandy soil is most suitable, and the bulbs should be lifted before Winter and kept in sand until planting time in Spring.

Cernua Bermudiana (*The Bermuda Buttercup*), One of the finest Winter-flowering plants for pot culture yet introduced. Pot 3 to 5 bulbs in a 6 to 8 inch pot. The flowers are of the purest bright Buttercup-yellow. Per 100, 3/-; per dozen, 6d.

Choice Mixed Varieties per 100, 3/6; per doz., 6d.

Puschkinia Scilloides.

(*The Striped Squill*).

A pretty and perfectly vigorous Spring-flowering bulb, resembling some of the Scillas. The flowers are white, richly striped with pale blue. It blooms the same time as *Chionodoxa*, and continues a long time in flower. Per doz., 1/-; each, 2d.

Sauromatum Guttatum.

(*Monarch of the East*).

Produces out of the dry bulb without water or soil a beautiful coloured flower spathe 16 inches long.

A highly remarkable beautiful bulbous flower attracting immediate attention. The only treatment required is to simply place the large flat round bulb on a table or shelf in a warm room or greenhouse; very soon the bulb begins to show a head, and within a few weeks a curiously formed flower 16 to 18 inches long develops. The flowers, which are spotted dark red on yellowish orange-red ground, are entirely different from any other as to colouring and shape.

After flowering this bulb should be planted in the open ground, where it then throws up elegant dark green wide expanded foliage, which itself forms a fine subject in the garden, particularly when planted in May in a moist and sheltered place. 7/6 per doz., 9d. each.

Schizostylis Coccinea.

Like a miniature *Gladiolus*, flowering from Autumn till Winter, blooms rich scarlet; a fine plant for borders or for forcing in pots; contrasts finely with *Chrysanthemums*, and a gem for cutting. Will grow in any light soil. Per 100, 6/-; per doz., 1/-

SPARAXIS.

These flower earlier than *Ixia*s, but require similar treatment. In habit they are dwarf and branching, but compact, therefore very suitable for pots. The colours are very bright, and in some varieties most gorgeous.

MONARCH OF THE EAST.

MR. GEO. LYNAS, Bryndilo, The Parade, Pontypridd, writes:—"The Collection of Bulbs duly came to hand and I am well satisfied with them. Bulbs ordered at the same time from another firm are far below them in appearance and size."

TIGRIDIA (Ferraria).

No flower is more gorgeously coloured than the Tigridia. They flower in the Summer, are quite hardy, and thrive admirably in light rich soil in a rather dry and sunny position. Lift the bulbs when at rest, and keep perfectly dry. For indoor culture pot the bulbs in November.

	Per doz.	Each.

TRILLIUM GRANDIFLORUM.

(*American Wood Lily—Indian Shamrock*).

With simple stems bearing three broad leaves in a whorl, and terminated in Spring by a snowy-white three-petalled flower of great beauty over three inches across; loves a shady nook and a moist atmosphere. 3/6 per doz.; 4d. each.

TRITELEIA (Triplet Lily).

Beautiful hardy Spring-blooming bulbs, useful for pot culture or planting in masses in borders, perfect gems for the greenhouse in early Spring, and the flowers being of great substance they remain in bloom a long time. They should be grown in a light, rich, well-drained soil, and prefer a sunny position.

Laxa (*Ituried's Spear*), umbels of rich purple flowers. Per doz., 2/-; each, 3d.

Uniflora (*Spring Starflower*), white shaded blue. Per 100, 2/6; per doz., 6d.

TRITOMA (Kniphofia).

The Torch Lilies are magnificent hardy plants for borders, shrubberies, &c. They all prefer a rich, light, sandy soil, and a liberal top dressing of well-rotted manure, with abundance of water in Spring and Summer. A covering of bracken, &c., in Winter is necessary, except in warm, dry positions.

	Each.—s. d.
<i>Uvaria</i> (<i>syn. T. aloides</i>), the ordinary Torch Lily, or Flame Flower, scarlet, shading to orange, very handsome	6d. to 0 9
— <i>grandiflora</i> , scarlet and yellow, a vigorous and lovely variety	9d. to 1 6
— <i>grandis</i> , bright orange scarlet, very striking and effective	1 0
— <i>nobilis</i> , pale red, shaded yellow, immense spikes, vigorous grower	1 0

For names and descriptions of many other beautiful Tritomas, see *Herbaceous Catalogue*.

TRITONIA (Crocasmia).

These flower with the *Ixias*, and require the same treatment. In appearance they are not unlike a miniature *Gladiolus*; the colours are soft and very pleasing. All the varieties are equally adapted for the open border and for pot culture, and force well.

Aurea, brilliant orange-red, autumn flowering. Per 100, 7/-; per dozen, 1/-

Mixed Varieties, per 100, 4/-; per dozen, 9d.

TROPÆOLUM.

Beautiful greenhouse climbers; very ornamental when trained on wire balloons. They like plenty of sun, and succeed best in a light rich loam containing plenty of sand. The pots should be well drained.

Polyphyllum (*Yellow Rock Indian Cress*), golden yellow flowers. Each, 6d.

Tricolorum (*Jarrattii*), calyx orange-scarlet, tipped with black, petals orange. A very showy half-hardy species. Each, 6d.

Speciosum (*Flame Flower*), one of the loveliest of hardy climbers, literally covered from June to August with brilliant vermilion flowers.

Strong tubers, well established in pots. Each, 6d.; per doz. 5/-; per 100 30/-

TUBEROSE (Polianthes Tuberosa).

These have beautiful pearly-white, deliciously scented Gardenia-like flowers. From 12 to 20 flowers are generally on a stem about 2 feet high, and as part only expand at one time, a small quantity gives a good succession of flowers for a month or six weeks. Valuable for bouquets, button-holes, &c., and in pots effective among ferns and other dwarf plants. Pot the bulbs firmly in a mixture of rich loam and well-decayed manure. After potting, plunge in a bottom heat of 60° or 70°, and water freely when foliage appears. In forcing, great care should be taken that they do not at any time get chilled, either before or after potting.

Double American, "The Pearl," pure white double flowers, the best variety of all. Per 100, 10/-; per dozen, 1/6; Extra large selected bulbs, 12/- per 100; 1/9 per dozen.

African, double, pure white, sweet-scented flowers. The earliest flowering variety. Per 100, 17/6; per dozen, 2/6.

WATSONIA.

Arderni, somewhat like a *Gladiolus* in appearance, described by the raiser as the purest white flower on earth. It is a perfect gem for the Florist, and quite supersedes the single white *Azalea* for cut flower work. When cut and placed in water it will remain in good condition for at least three weeks. Strong bulbs, 9d. each.

Winter Aconite, see *Aconite*.

ZEPHYRANTHES (Zephyr Flower).

This beautiful genus is sometimes called the Giant Crocus of North America. The bulbs may be planted 4 inches to 6 inches deep in a sheltered sunny border in open sandy loam, where they can be kept fairly dry during the winter. They all succeed admirably with greenhouse treatment, *rosea* being specially well adapted for pot culture.

Candida, the true "Flower of the West Wind," silvery white. Per 100, 4/-; per dozen, 9d.

Rosea, a pure rose self, the loveliest of all. Per dozen, 5/-; each, 9d.

Mr. F. CLARKE, Belgrave Road, Colwyn Bay, writes:—"Thanks for Bulbs to hand, which arrived in splendid condition and very satisfactory."

Spring Flowering Plants,

FOR AUTUMN PLANTING.

Many of the dwarfed Spring-flowering plants may be utilised with charming effect to form the ground-work for beds of Daffodils, Narcissus, Tulips, Hyacinths, &c. Not only does their foliage hide the bareness of the ground during the winter months but they may be so arranged as to blend harmoniously with the bulbs amongst which they are planted. A bed of late Daffodils for example with the blue Forget-me-not as a ground work, produces a delightful effect; White Arabis with Scarlet Tulips towering above it is exceedingly striking. Blood Red Wallflowers planted with Tall Yellow Tulips make a good combination, in fact any number of charming and varied arrangements may be made and the effect is always better than where the bulbs only are planted. The following are a few of the earliest flowering varieties, for complete list, see our Herbaceous Plant Catalogue.

NOTE.—All the following are strong, healthy, well-rooted, transplanted plants, specially grown to give a good display of bloom in Spring.

Alyssum saxatile compactum. 1/6 per dozen, 8/- per 100.

Antennaria candida, white foliated plant. 1/6 per doz., 10/- 100.

Arabis albid. 1/6 per dozen, 8/- per 100.

" " fl. pl. *Snowdrift*, a gloriously beautiful early Spring flowering plant. The flowers are double and produced on strong spikes with the utmost freedom. 2/- per doz.; 12/- per 100.

Aubrietia, purpurea, purple, per doz., 1/6; per 100 6/-

" *græca*, light purple, per doz., 1/6.

" *Dr. Mules*, large flowers of rich purplish-violet. Per doz., 3/-; per 100, 20/-

Canterbury Bells, white, blue, and rose. 1/- per doz.; 6/- per 100.

Cerastium arvense tomentosum, silvery-grey foliage, white flowers. 1/6 per dozen; 8/- per 100.

Sweet Williams, a most beautiful strain. 1/- per doz., 6/- per 100.

Silene pendula compacta, 1/- per dozen; 6/- per 100.

Wallflowers, yellow and dark. 1/- per doz., 6/- per 100.

Ornamental Chinese Bowls.

SUITABLE FOR GROWING

CHINESE SACRED NARCISSUS, HYACINTHS, DAFFODILS,
TULIPS, &c.,

IN JADOO FIBRE OR SILVER SAND.

A great many varieties of Bulbs may be successfully cultivated in Bowls with wet sand or fibre and are very suitable for house decoration. Commencing with Roman Hyacinths in November, a continuous display may be had during the winter months and lasting until the end of April, with practically the same treatment as if grown in ordinary pots.

Bowls in red and blue, from 9d. to 4/6 each. In sets of 3 from 4/6 upwards.

Bowls in blue and white, from 9d. to 3/6 each. In sets of 3 from 2/6 upwards.

HYACINTH GLASSES AND SUPPORTS.

We do not pay carriage on these goods when sent alone, and we cannot take any responsibility for breakages. They are sent out securely packed, and in case of breakage purchasers must apply to the Carriers for compensation.

HYACINTH GLASSES, in plain or fancy designs, 1/-, 1/6, 2/-, 2/6, and 3/6 per pair.

HYACINTH GLASSES, Triple, 4/6 and 6/- each.

HYACINTH SUPPORTS, Brass Wire, best make—(These should be ordered with the Glasses, so that the correct size may be sent). 4/- per dozen.

A USEFUL TOOL FOR BULB PLANTING, Etc.

very short time, and without the least disturbance of the sward. The length of the tool is 38 inches over all, weight about 3½ lbs. The cup is manufactured from high-class hardened steel and always carries a keen cutting-edge.

THE SPECIAL BULB PLANTER specially designed for planting bulbs in grass. At every operation it lifts a clean circular little sod of grass, which is released from the cup when the second hole is made, and lies ready at hand to fill in the holes when the bulbs have been put in. A time must be chosen for planting when the ground has become softened after early Autumn rains and not when in a hard and baked condition, as it is then impossible to use this, or indeed any other, tool with success. By the use of THE SPECIAL BULB PLANTER a large quantity of bulbs may be planted in a

Clibrans' Potash Manure ...	6d. & 1 0	1 3	4 6	8 6

½ cwt. and upwards Carriage Paid.

CLIBRANS' "IDEAL" FERTILIZER.

THE PERFECTION OF MANURES.

Invaluable for all kinds of Plants, Flowers, Vines, Roses, Fruits, Vegetables, and all Garden Crops.
SAFE. EFFECTUAL. ECONOMICAL.

FREE FROM SMELL AND ALL INJURIOUS AND USELESS INGREDIENTS.

This manure is prepared from highly concentrated fertilizing materials only, and whilst containing all the substances necessary for perfect plant sustenance, is particularly free from useless, impure, and injurious ingredients, and leaves behind no deleterious residue. Many prominent Horticulturists and Exhibitors have, during the past few years, used our "Ideal" Fertilizer, and by its aid won numerous prizes at the leading shows.

PRICES:—Tins, 6d. and 1/-; Post Free, 10d. and 1/5. Bags, 7 lbs., 1/9; 14 lbs. 3/-; 28 lbs. 5/-; 56 lbs., 9 6; per cwt. 18/- ½ cwt. and upwards Carriage Paid. No charge for bags.

CLIBRANS' BLOOD MANURE.

As a nitrogenous manure this is unequalled. It may equally well be mixed with the soil when preparing the compost as a top dressing, or be used as a liquid manure at the rate of from ½-oz. to 1-oz. to the gallon. Place in the water the day before using, and mix well when applying. Blood manure is not immediately soluble, but after being in contact with the soil for some time, decomposition sets up, and it dissolves gradually. It is invaluable for all fruit and flowers, and particularly for promoting the growth of Vines, Roses, and Strawberries in pots.

PRICES:—In Packets 6d. & 1/-; Post free, 10d. and 1/5. 7 lbs. 1/9; 14 lbs. 3/-; 28 lbs., 5/-; 56 lbs. 9 6; per cwt. 18/- ½ cwt. and upwards Carriage Paid.

CLIBRANS' BONE MEAL.

The quality of our Bone Meal cannot be excelled by any firm in the kingdom. Being sun-dried, it is absolutely pure and free from sulphuric or other acid and impurities. We supply the Bone Meal in two grades—the Superfine and the Ordinary; the latter is somewhat coarser, and therefore slightly slower in its action.

PRICES:—FINEST QUALITY, SUPERFINE, OR ORDINARY GRADES, per lb. 2d.; 14 lbs. 2/-; per ½ cwt., 8/-; cwt. 14/- ½ cwt. and upwards Carriage Paid.

SUPERFINE AND ORDINARY, Good Quality, per lb. 2d.; 14 lbs. 1/9; ½ cwt. 6 6; cwt. 12/-; ½ cwt. and upwards Carriage Paid.

NOTE.—Unless instructed to the contrary, we invariably send the finest quality.

BONES—HALF INCH.

These are of precisely similar quality to our Bone Meal, but of course dissolve less readily in the soil and last longer, and are generally used for vine and other fruit-trees borders, orchards, &c.

PRICES:—FINEST QUALITY, per ½ cwt. 7/-; cwt. 12/- ½ cwt. and upwards Carriage Paid.
GOOD QUALITY, ½ cwt. 6/-; cwt. 10 6. ½ cwt. and upwards Carriage Paid.

NOTE.—Unless instructed to the contrary, we invariably send the finest quality.

CLIBRANS' LAWN MANURE.

INVALUABLE FOR CRICKET, TENNIS, CROQUET, AND OTHER LAWNS.

Our Lawn Manure has, like our "Ideal" Fertilizer, met with universal approval and commendation. It is carefully prepared from high-class fertilizing materials only, being specially adapted for the encouragement of the growth of the finer grasses, ultimately eliminating the coarser kinds, as well as docks, weeds, &c.

PRICES:—In Bags, per cwt. 11/6. Per ½ cwt. 6/- ½ cwt. and upwards Carriage Paid.
No charge for bags.

Various Manures.

All free on rails except where otherwise stated.

Basic Slag, 14 lbs., 1/-; per cwt., 6/-; 5 cwt. 25/-; 10 cwt. 45/-
Beeson's, in boxes, 1/- and 2/6; bags, 56 lbs., 8/-; per cwt., 15/-

Clibrans' Concentrated Mushroom Spawn.

BEST QUALITY, PER BRICK, 6d.; PER BUSHEL OF 16 BRICKS, 5/-

We make a speciality of Mushroom Spawn, and have much pleasure in commending it to the notice of those who have not already given it a trial. The large number of testimonials we are continually receiving, referring to the prolific crops obtained by its use, are in themselves a sufficient guarantee as to its excellence.

HOW TO GROW MUSHROOMS.

Mushrooms may be grown in any dark place where the temperature ranges from 50 to 60 degrees. Use fresh manure almost free from litter, from stables where the horses are fed on dry food. Expose the manure in an open shed for a few days before using it, turning it occasionally to prevent it heating, the great secret in growing fine Mushrooms being to have the manure neither too wet nor too dry, and to avoid it becoming hot, either before or after it has been made into the bed. When making the bed, shake the manure well out, and beat it firmly down, adding more and more till you have a depth of from 10 to 15 inches, and as solid as possible. Thrust two or three pointed sticks in the bed, so that you may afterwards ascertain the temperature, and leave for a few days to heat. When cooling, and you find from the sticks there is a steady temperature of between 70 and 82 degrees, break the spawn in pieces the size of a walnut, and press them firmly, nine inches apart, into the surface of the bed—six bricks will be about sufficient to spawn a bed of four square yards (3 ft. 12 ft.). After spawning cover the bed one or two inches deep with stiff loamy soil, and beat it firmly down, finishing with an even surface, and cover with a little hay. Mushrooms may be expected in six or eight weeks from the time of spawning, and the bed should continue productive for a couple of months. An occasional sprinkling with tepid water will hasten their growth, but care must be used not to give it in excess, as, if the bed becomes saturated, it will be spoiled. If, when one bed begins to yield another for succession is prepared, a continuous supply of Mushrooms may be had throughout the year.

When Mushrooms are grown on shelves placed against a wall, the Mushroom house should be situated as much as possible in the shade, in order that the internal temperatures may not be subjected to so much fluctuation by reason of the sun shining on the roof.

MISCELLANEOUS ROOTS FOR FORCING.

ASPARAGUS. Extra strong selected roots	20/- per 100
RHUBARB. Extra sized roots for forcing	12/- per dozen
SEA-KALE. Extra strong selected Crowns	16/- per 100

RETARDED SEA-KALE. For use during the Summer and early in Autumn, before the ordinary crowns come into use.	35/- per 100
Strong Selected Crowns. (Supply limited)	

FOREST TREES.

We beg to draw the attention of intending planters to our Extensive and Complete Stocks of Seedling and Transplanted Forest Trees, grown and regularly transplanted at a high altitude at our Hale Farm Nurseries. These grounds, as our patrons are already aware, are famous for the production of fibrous-rooted trees, and strong vigorous healthy growth above ground.

We invite correspondence upon all matters pertaining to this class of work, and shall be pleased to make arrangements for consultations, surveys, &c., by appointment. Special List of Forest Trees, free on application.

FIGS.

Our collection of Figs comprise all the best and most prolific varieties of this succulent fruit. We take special care to insure all our plants being well-grown and the wood thoroughly ripened and matured.

Bushes, in pots, 2/6, 3/6, 5/-, 7/6, and 10/6 each.

Extra sized specimens of some varieties can be supplied, sizes and prices on application.

A limited number of Plants can be supplied, trained flat, for walls, &c., at 5/- and 7/6 each.

For full list of varieties, cultural instructions, and other information, see our Catalogue of Fruits, gratis and post free.

GRAPE VINES.

We wish to draw special attention to our stock of Grape Vines. We offer a quality that if equalled is certainly not excelled by any in the kingdom. The canes are stout, strong, short jointed, firm, and splendidly ripened; in first-class condition either for fruiting in pots or borders. All our Vines are grown slowly on the cool system, and the pots are not plunged when the canes are in growth. This gives a strength and vigour that is not attainable by any other means. We cordially invite inspection of our Vines; when in growth they make an interesting feature.

Strong Planting Canes, 3/6 and 5/- each.

Strong Fruiting Canes, 7/6, 10/6, and 12/6 each.

A full List of all the Choicest Varieties for indoor or outdoor cultivation is contained in our Catalogue of Fruits, gratis and post free.

STRAWBERRIES.

During recent years improved varieties, possessed of the hardest constitution, heavy croppers, and of the highest quality in flavour and in other respects, have been introduced, making the Strawberry the most profitable of all our small fruits. Our collection is unsurpassed for completeness and extent, each variety is carefully and separately tested in ground set apart for the purpose; by this means we are enabled to accurately determine the true value of each variety, and are always pleased to place our experience at the disposal of our patrons and assist them in the formation of their collections and the selection of the most suitable varieties.

PRICES.

Prepared Runners from Ground, our selection, 3/- per 100; 500 in 10 varieties, 12/6; 1,000 in 20 varieties, 25/-

Runners in Pots.—Varieties most suitable for forcing can be supplied in 5 in. pots at 4/- to 6/- per dozen.

All the Varieties can be supplied in 2½ in. pots at an extra charge of 10/6 per 100 on the price of Runners from Ground.

SPECIAL COLLECTIONS OF VARIETIES FOR TRIAL PURPOSES.

The fruitfulness of Strawberries varies very much in different situations and soils. We offer for trial purposes a Collection of 100 Plants in 20 varieties, for 6/-, or 100 in 30 varieties for 7/-.

Either of these Collections will show the Varieties best adapted to a special locality.

NOTE.—A Special full descriptive List of all the best varieties of Strawberries, together with cultural information, &c., will be forwarded gratis and post free on application.

To Employers requiring Head or Under Gardeners, Head or Assistant Foresters, or Farm Bailiffs.

We shall be pleased to send our List of Names and Addresses of suitable men, with full particulars of wages required, experience, and references. Great care is taken that no man shall be placed on our Register whose character is not good. Our acquaintance with the men's abilities and characters cannot but be of service to all needing men, as the difficulty of selecting from scores of answers to an advertisement, or from applicants of whom nothing whatever is known is felt by every employer of labour; frequently it is noticed that preference is given to an inferior man and much better men passed over.
